

SPECIAL OPERATION CONDITION COMPLIANCE
KIMB(FM) DIX, NE
MICHAEL RADIO COMPANY, LLC
LICENSE APPLICATION
JUNE 2022

This license to cover application for Construction Permit # 0000159321 contained a Special Operating Condition requiring that if a different antenna was specified then was documented with the original application, that a new RF Field showing would need to be submitted before Program Test Authority would be granted.

The Permittee has installed a different antenna then originally proposed. It has installed an Eight (8) bay BEXT MDR1-NV, Horizontal Only polarized antenna system with 0.65 wavelength spacing between the antennas.

An updated Environmental Statement is hereby attached to this license application documenting compliance with RF Environmental concerns. This antenna will produce an even lower RF Power density at any point on the ground then the original proposed antenna system.
