**ENGINEERING REPORT**

---

**K10RW-D, Lake Havasu, AZ LPTV 10D Site-move Minor**

**ENGINEERING STATEMENT**

This LPTV facility has not yet been licensed.

**MEXICAN COORDINATION IS NOT REQUIRED**

The 48 dBu F50,90 contour does not extend beyond the 48 dBu F50,90 contour of the authorized channel 10 CP. This is shown on the Figure EE1 Map. The FCC has indicated that this will allow the application to be granted without Mexican Coordination.

**INTERFERENCE PROTECTION RESULTS**

A 0.1 kilometer step is requested and used for the TVStudy run.

The output from the FCC's current "TVStudy" software is attached demonstrating full compliance with the FCC's protection requirements.

Consent Agreements required for grant of this application: NONE

The applicant accepts any interference that is predicted to exist to the proposed facility by any licensed, authorized or previously proposed primary TV station. The applicant also accepts any interference that is predicted to exist to the proposed facility by any secondary TV facility that is given preferential status by the FCC over the Applicant's herein proposed facility.

**ENVIRONMENTAL STATEMENT**

This proposal does not involve a site location specified under Section 1.1307(a) through (a)(8) of the FCC Rules.

The proposed LPTV produces an ERP that is equal to or less than 0.025 kilowatts. Assuming: (a) a maximum ERP of 0.025 kilowatts; (b) a relative field of less than 0.2 in

the critical downward angles; and (c) a distance of at least 2 meters from the lowest antenna element to 2 meters above ground level, the maximum power density is calculated as follows:

$$S = 33.4 (F)(F)(ERP) / [(R)(R)]$$

Where, S equals power density in uW/cm<sup>2</sup>  
 F equals the relative field factor  
 ERP equals the effective radiate power in watts  
 R equals the distance in meters

$$= 33.4 (0.3)(0.3)(25) / [(2)(2)]$$

$$= 18.8 \text{ uW/cm}^2$$

18.8 uW/cm<sup>2</sup> represents less than the uncontrolled power density limit (315.3 uW/cm<sup>2</sup> for channel 14—channel 14 being the worst-case UHF channel or 200 uW/cm<sup>2</sup> for VHF). The electromagnetic radiation from this proposed operation will not produce a value in excess of the radiation standard. The electromagnetic radiation from the proposed operation will not combine with other facilities on or near the structure to produce a significant change in value.

If this is a structure that may support various other operations, the applicant will cooperate with the other operators in establishing a plan for work done on the structure in close proximity to the existing antenna.
