

Justification

On the weekend of December 9 through the 14th the station had several power surges at the television transmission site. In between Christmas and New Year's Day, the station's engineer was able to climb up on the roof and do a visual inspection of the coax, power divider, and antenna. There are repairs that need to be made.

We have been working to get equipment and parts to repair the transmitter and antenna and restore the station back to full coverage. We hereby request permission to operate at reduced power from licensed 10,000 watts ERP to 600 watts ERP. The station's TPO is 90 watts until the repairs can be completed.
