Ch. 11 5 kW 452 m

Gray Television Licensee, LLC (“*Gray*”) is the FCC Auction 112 winning bidder for a Construction Permit for the vacant full power television allotment on Channel 11 at Yuma, AZ. Pursuant to FCC Public Notice,¹ *Gray* is submitting this long-form application (Form 2100 Schedule A) to obtain a Construction Permit to specify the operation on Channel 11 at Yuma AZ. As specified herein, the new Channel 11 facility will operate with an effective radiated power (“ERP”) of 5 kW directional at 452 meters height above average terrain (“HAAT”).

Gray proposes to construct the Channel 11 facility by installing a side-mounted transmitting antenna on the tower structure is associated with FCC Antenna Structure Registration number 1225054. No increase to the overall structure height will result.

The proposed antenna is an elliptically polarized directional ERI model ATW4V4-ESWC-11H (30 percent vertical polarization). The maximum horizontally polarized ERP is 5 kW and the maximum vertically polarized ERP is 1.5 kW. The vertically polarized component will not exceed the horizontally polarized component at any azimuth. The directional antenna’s azimuthal patterns are depicted in Figures 1 and 1A for horizontal and vertical polarization, respectively. Similarly, the antenna’s elevation patterns are provided in Figures 2 and 2A.

Figure 3 supplies a map that demonstrates compliance with §73.625(a)(1) regarding coverage of the entire principal community.

¹*Auction of Construction Permits for Full Power Television Stations Closes*, Public Notice, DA 22-659, released June 23, 2022.

Interference study per FCC OET Bulletin 69² shows that the proposal complies with the 0.5 percent limit of new interference caused to pertinent nearby full service and Class A television stations as required by §73.616. The interference study output report is provided as Table 1.

Human Exposure to Radiofrequency Electromagnetic Field (Environmental)

The proposed operation was evaluated for human exposure to RF energy using the procedures outlined in the FCC's OET Bulletin Number 65. Based on OET-65 equation (10) and considering 30 percent antenna relative field in downward elevations (pattern data shows less than 30 percent relative field at angles 20 to 90 degrees below the antenna), the calculated signal density near the tower at two meters above ground level attributable to the proposed facility is $1.8 \mu\text{W}/\text{cm}^2$, which is 0.9 percent of the general population/uncontrolled maximum permitted exposure limit. This is well below the five percent threshold limit described in §1.1307(b) regarding sites with multiple emitters, categorically excluding the applicant from responsibility for taking any corrective action in the areas where the proposal's contribution is less than five percent.

The general public will not be exposed to RF levels attributable to the proposal in excess of the FCC's guidelines. RF exposure warning signs will continue to be posted. With respect to worker safety, the applicant will coordinate exposure procedures with all pertinent stations and will reduce power or cease operation as necessary to protect persons having access to the site, tower, or antenna from RF electromagnetic field exposure in excess of FCC guidelines. This exhibit is limited to the evaluation of exposure to RF electromagnetic field. No increase in structure height is proposed.

²FCC Office of Engineering and Technology Bulletin number 69, *Longley-Rice Methodology for Evaluating TV Coverage and Interference*, February 6, 2004 ("OET-69"). This analysis employed the FCC's current "TVStudy" software with the default application processing template settings, 2 km cell size, and 1 km terrain increment. Comparisons of various results of this computer program (run on a Mac processor) to the FCCs implementation of TVStudy show excellent correlation.
