

**Compliance with Special Operating Conditions**  
**K270AY Grand Junction**  
**License to Cover**  
**August 2022**

The construction permit 0000195200 bears a condition requiring the performance of spurious emissions measurements “with all stations simultaneously utilizing the shared antenna”.

K270AY does not share an antenna with any other station, and did not indicate in the construction permit application that this was a diplexed operation. Additionally, a search of the FCC’s FM database at this site has not identified any other station with this same antenna height (90 meters AGL) on this tower (ASR 1226999), so it is not clear what other station was thought to be sharing the antenna. Regardless, the licensee wishes to clarify that this is not a combined operation, and therefore measurements of spurious emissions are not required for grant of the license.
