Narrative for Reduced Power Notification for KZKS-FM FAC# 71959

On August 4, 2022 during a routine inspection of our Energy Onyx 10 Kw transmitter the safety interlock circuit board failed and several capacitors blew out. Our engineer had the necessary parts from other Energy Onyx transmitters we have, however several also failed during the repair attempt. Energy Onyx is no longer in business. We are attempting to contact other owners with similar transmitters to find these interlock circuit boards and attempting to repair the failed pieces from this transmitter. As this will go further than the notification we are requesting an STA to give us time to make the repairs and resume full power.
