

## EXTENSION OF ENGINEERING STA

Licensee recently obtained a construction permit to move KOUV-LP to another channel to solve the ongoing interference issue on CH 300. Licensee was to recommence normal operation with new CP; however, soon after the grant of the CP 06/23/2022, another licensee, co-channel to the new CP, approached KOUV-LP with the concern of alleged possible interference on the new channel. The two licensees are currently in the process of discussing the issue to work out concerns. Because of that, KOUV-LP is momentarily holding off on licensing-to-cover for the new CP. Because of this, an extension of the current Engineering STA is being requested until details are worked out on this issue.
