

### ATSC 3.0 OPERATION

WCMN-LD commenced digital operation using the ATSC 3.0 NextGen format. This exhibit is being provided to notify the FCC of this operation since the LMS doesn't permit a NextGen modification notification to be included as part of a license to cover a digital LPTV construction permit. Following the grant of the attached license application, a separate license modification application will be filed to convert WCMN-LD's license to NextGen operation.

WCMN-LD initially commenced digital operation in the NextGen format and, as a result, has no simulcast partners. As a digital LPTV station, WCMN-LD is not required to simulcast an ATSC 1.0 signal and, since it has no cable carriage, it isn't required to provide any MVPD notifications.
