

Request to Extend Engineering STA

WNMF-LD went on the air at its existing licensed facility since 1994. In November 2018, the Applicant lost the tower lease and went off the air.

On November 13, 2018, the Applicant applied for special temporary authority to operate WNMF-LD on channel 17 at a new site that is less than 30 miles distance from the existing licensed facility. The F(50,90) 51 dBu contours of the proposed facility overlaps with the F(50,90) 51 dBu contours of the existing licensed facility. The proposed STA facility shrinks the protected 51 dBu contour in every direction versus the licensed facility.

On December 27, 2018, WNMF-LD (FID 94513, Morristown, NJ) was granted authority to operate pursuant to Engineering STA (File Number 0000063470). The latest STA Extension is scheduled to expire on October 27, 2022 (File Number 0000187682).

Licensee hereby respectfully requests the Engineering STA be extended for an additional 6-month term while WNMF-LD awaits for the grant of its pending minor modification application filed on November 25, 2020 (File Number 0000127456).
