

Extraordinary Circumstances

WUDT-LD, channel 8, Detroit, MI, has a pending application to increase it's coverage with new antennas. That application is currently awaiting approval from Canada.

A recent snow and ice storm severely damaged the current antennas, causing a large amount of reverse power. To stay on the air, we are requesting an STA to operate with the proposed antennas at a reduced power that falls within the currently granted 48 dBu contour. (See Attached)

If and when we get approval from Canada, we will increase the ERP to the full 3 Kw power. The STA will best serve the public by not causing a disruption of WUDT programming even though the coverage is greatly reduced.
