

Amended STA Request Justification

Channel 51 of San Diego, Inc. ("Channel 51"), licensee of station K12PO, submits this amendment to clarify that the signal will be on a custom antenna mounted to the existing transmitter. The antenna will be on a "Roof Skid," secured to the transmitter building via concrete block ballasting and guying cables.

The Chief Engineer built the antenna using the basic design criteria for a $\frac{1}{4}$ wave dipole using ARRL Antenna Book. The antenna is omnidirectional. To ensure that coverage remains within the authorized contour, power would be reduced to 500 watts forward power.

Channel 51 hereby requests special temporary authority to operate K03JB-D on channel 3 consistent with the parameters set forth in the STA request.
