

## **Satisfaction Of AM Condition Of Construction Permit**

In regards to Condition 1 of the granted construction permit for the above captioned applicant (BNPL-20131029AGX): §1.30002(d) of the Commission's states that significant modification to an existing tower in the immediate vicinity of an AM station includes any change that would alter the tower's physical height by 5 or more electrical degrees at the AM frequency or the addition or replacement of one or more antennas or transmission lines on a tower that has been detuned or base-insulated.

We have been advised by the tower owner, American Tower, that the antenna structure that this station is authorized at is neither base insulated nor has it been detuned for the following nearby AM station: WORL 660kHz-DA Altamonte Springs, FL.

With that, the applicant certifies that the construction of the above captioned facility does not constitute the construction of a new tower nor the significant modification of an existing tower and therefore is not subject to the notification requirements of Part 1, Subpart BB of the Commission's Rules.
