

Core Programming

KONG-TV, Inc. makes every effort to make good any programming preempted on KONG's main channel. However, there were three extraordinary issues that occurred during 2022 that affected the children's programming:

- On May 22, 2022, a Master Control automation error caused the children's block of programs to begin airing 30 minutes earlier than the regularly scheduled time periods. While the entire 3-hour block of programs did air, three of the five programs affected that day were re-aired the following weekend.
- On December 18, 2022, a break structure error caused an episode of *Teen Kids News* to fail twenty-four (24) minutes into the show causing the following episodes of *Think Big* and *Made in Hollywood: Teen Edition* to start five minutes early.
- An unknown technical issue caused the screen to go dark during an episode of *Roots Less Traveled* on December 18, 2022; and on December 25, 2022, the scheduled makegood date, the same technical issue recurred.
