Mr Doak,

I apologize for the delayed response. This has been a long road with the attempt to update the ASR. We have been working now for several years to try and resolve the FAA issues. At this point it appears we have hit a dead end and are taking a last look to see what might be done at a power level considerably lower than previously proposed. If you would dismiss pending app File Number 0000149924, we will submit a new application for what we find agreeable in the future.

Thank you for your patience with this one.

Mr. Travis:

Regarding the application for KIMI(FM), Malvern, Iowa (File No. 0000149924). Please give me an update on when the ASR will be amended or when the application will be amended to make it grantable.

Thank You

Art Doak
FCC

Dear Mr Doak,

Tracey Bogans relayed to us that if we e-mailed you the ASRN for our KIMI minor mod app, that we would not need to file an amendment to the application. The ASRN is 1259292. Am I correct that the ASRN needs to reflect the overall height of 60 meters which allows for our proposed COR of 53m? At this time the ASRN shows an overall height of 46 meters.

Thank you,

Jim Travis

Subject: KIMI(FM) Malvern, IA Facility ID No. 189501 ASRN needed

Dear Mr Doak,

The KIMI tower has an ASRN of 1259292 but shows a structure height of 46m and the coordinates are off a little. The existing and proposed KIMI COR is 53m above ground which requires an overall tower height of 60m. We have learned that the tower owner listed on the ASRN no longer exists. The process for correcting the owner information along with the height and coordinates is not going to be a smooth process as it normally begins with the current owner. We are working along with our legal services on obtaining a corrected ASRN. I will let you know when we have a solution and appreciate your patience.

Thanks,

Jim

Hello:

This is regarding Application File Number 0000149924 for KIMI(FM), Malvern, Iowa, Fac ID No. 189501. In the application it is stated that the proposal does not have an FCC antenna structure registration number (ASRN). However, the proposal has been filed with the FAA (Study No. 2020-ACE-6325-OE). Because the proposal has been filed with the FAA and because of objections by the FAA to similar proposals, the proposed tower must be registered with the FCC.

Please note, the following discrepancies between the FCC application and the FAA study must be resolved by either amending the FCC application or amending the FAA study.

Coordinates

FCC application: 40 56 56.3 NL, 95 45 29.1 WL

FAA study (nearest tenth): 40 56 56.4 NL, 95 45 29.2 WL

Site elevation

FCC application: 390 meters

FAA study: 391.7 meters

Thank You
