

## **Reasons for Application for Minor Modification of License W22FA-D**

TV Red de Puerto Rico is hereby requesting a Minor License modification of LPTV station W22FA-D to change the antenna system and increase the ERP, a change that will significantly improve the station coverage.

No change in site or antenna RC is proposed, thus there will be complete overlap of service contours with the licensed facility. A copy of the TVStudy, performed with a L-R cell size of 0.5 km. and terrain profile increment of 0.05 km. is attached. As shown in this TVstudy, no adverse interference is caused to any other TV facility, other than to station W22FF-D, a co-channel CP also owned by TV Red de Puerto Rico, who accept any mutual interference that may be caused by the two stations and will appropriately deal with the potential interference, if necessary, by enacting a CSA between the two stations.
