

MINOR CHANGE REQUEST  
Facility ID:155693  
Translator K257GZ Stinnett TX

This instant request proposes to modify this translator to an adjacent channel at the licensed location and elevation at an increased Effective Radiated Power. While technically clear of co-channels station KEFH (FM) Clarendon TX, there is reception interference to K257GZ in fringe areas of the translator coverage area; specifically closer to the primary AM station coverage. A simple minor change from Channel 257 to Channel 260 will solve this situation, with no co-channel facility within over 200km in any direction.

The translator will continue to offer fill-in service for Primary Station KGRO (AM) and the map below demonstrates contour protection and compliance with AM contour and distance requirements.
