

### KORS-CD License Renewal Silent STA Exhibit

KORS-CD, FCC Facility ID No. 71069, Portland, OR, (the “Station”) was silent during the license period pursuant to FCC authorized STA. On March 18<sup>th</sup>, 2018, the Station went silent because it had been issued an experimental authorization to transmit in ATSC 3.0 mode. Due to technical issues, the station could only transmit random data and it was wasteful to run the transmitters when no actual testing work could be done. The Silent STA was filed at the request of the Video Division Staff.

The Silent STA was extended August 14<sup>th</sup>, 2018 after the Commission dismissed the application for renewal of the Station’s experimental authorization, it authorized six months of silence to return to ATSC 1.0 format. Additionally, the licensee needed to order a new combiner to accommodate KOXO-CD / KORS-CD on first-adjacent Channels 15 and 16. The Combiner was ordered in March of 2018, but still not delivered as of the August 8, 2018 extension.

The station filed a resumption notice on February 14<sup>th</sup>, 2019.
