Ch. 32 100 kW 433 m

Gray Television Licensee, LLC (“*Gray*”) is the permittee of digital television station KAZF, Channel 32, Facility ID 776273, Flagstaff AZ (file# 0000195680). KAZF is an unbuilt new full power television station which arose from FCC Auction 112. KAZF is authorized to operate with 100 kW effective radiated power (“ERP”) with a directional antenna at 444 meters height above average terrain (“HAAT”). It has been determined that other appurtenances on the tower obstruct the authorized antenna height. *Gray* herein seeks a modification of the CP to specify a reduction in antenna height and to specify a slightly different directional antenna model.

As with the current CP, the proposed facility will employ a new antenna to be side-mounted on the tower structure associated with FCC Antenna Structure Registration number 1007647. The proposed site is atop Mormon Mountain, overlooking Flagstaff. No increase to the overall structure height will result.

The proposed antenna center of radiation height above ground level (“AGL”) is 25.6 meters, an 11.0 meter reduction from 36.6 meters AGL as currently authorized. The corresponding antenna HAAT is 433.1 meters.

The proposed antenna is an elliptically polarized directional Dielectric model TFU-16DSB-VP-M-R (30 percent vertical polarization). The maximum horizontally polarized ERP is 100 kW and the maximum vertically polarized ERP is 30 kW. The vertically polarized component will not exceed the horizontally polarized component at any azimuth. The directional antenna’s

azimuthal patterns are depicted in Figures 1 and 1A for horizontal and vertical polarization, respectively. The antenna's elevation pattern is provided in Figures 2.

Figure 3 supplies a map that demonstrates compliance with §73.625(a)(1) regarding coverage of the entire principal community.

Interference study per FCC OET Bulletin 69¹ shows that the proposal complies with the 0.5 percent limit of new interference caused to pertinent nearby full service and Class A television stations as required by §73.616. The interference study output report is provided as Table 1.

Human Exposure to Radiofrequency Electromagnetic Field (Environmental)

Gray will participate in an RF electromagnetic field exposure safety program, along with other broadcasters and FCC licensees that utilize the Mormon Mountain site area. Appropriate exposure abatement and access control procedures will be established and followed, in order to comply with the FCC's exposure limits. *Gray* shall conduct post-construction RF exposure measurements to evaluate the level of RF exposure resulting from the proposed KAZF facility. As necessary, based on these results and considering all emitters, appropriate exposure abatement procedures will be established and followed in order to comply with the FCC's exposure limits. Such abatement procedures may involve the restriction of access to certain areas and/or facility modifications to reduce RF levels.

Considering the abatement program and access control, the general public and workers will not be exposed to RF levels attributable to the proposal in excess of the FCC's guidelines. RF exposure warning signs will continue to be posted. With respect to worker safety, authorized personnel will be trained and/or supervised as necessary for access to any "controlled" areas. *Gray* will coordinate exposure procedures with all pertinent stations and will reduce power or cease

¹FCC Office of Engineering and Technology Bulletin number 69, *Longley-Rice Methodology for Evaluating TV Coverage and Interference*, February 6, 2004 ("OET-69"). This analysis employed the FCC's current "TVStudy" software with the default application processing template settings, 2 km cell size, and 1 km terrain increment. Comparisons of various results of this computer program (run on a Mac processor) to the FCCs implementation of TVStudy show excellent correlation.

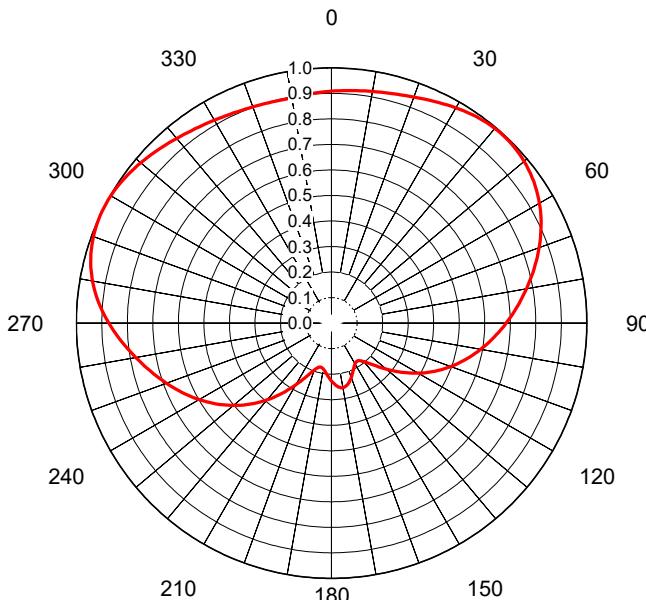

operation as necessary to protect persons having access to the site, tower, or antenna from RF electromagnetic field exposure in excess of FCC guidelines.
