Subject: STA requests filed 6/1/2023 for K264BL and K203EL NOT GRANTED -- FCC

Mr. Fajarado:

Two requests for Special Temporary Authority filed June 1, 2023 for FM translators K264BL and K203EL seek authority to operate temporarily from a different site, as the licensed transmitter sites are said to be is no longer available. However, the technical information provided in the STA attachments are incomplete, and we cannot properly evaluate your requests. Therefore, NO STAs will be granted at this time.

Please electronically file amendments to the STAs in the LMS database to include full engineering information for the proposed operations. This needs to include antenna heights above ground, above mean sea level, and average terrain, latitude and longitude, tower height data above ground and site elevation, and antenna structure registration number (ASRN) if one exists. You must also include information about the antenna to be used, most importantly whether nondirectional or directional. If it is directional, the antenna pattern relative field values will also need to be entered. Any potential radiofrequency exposure issues should be addressed also.

Please be aware that, to be acceptable, the proposed STA 60 dBu service contour needs to stay within the licensed 60 dBu service contour. You should check this before submitting any amendments, to avoid further problems.

Please let me know once the amended parameters have been filed.
