

**Explanation for Reduced Power Operation**  
**WMYD**  
**Facility ID 74211**  
**Detroit, MI**

WMYD recently experienced a complete failure of its main transmitter which is no longer repairable. As such, the station has switched to its backup transmitter which is only capable of 65% of the licensed output power. WMYD expects to remain on its backup transmitter until it can acquire and install a new main transmitter, but the timetable to complete the replacement is currently unknown. WMYD will file for Special Temporary Authority to cover the low power operation.
