

### Request for Special Temporary Authority

The instant application seeks Special Temporary Authority (“STA”) to operate a temporary facility to continue service to the public during construction of the station’s permanent facilities. The station’s prior authorized CP site is no longer available to it because of the construction of a multi-million dollar pedestrian sky bridge. With the opening of that bridge to the public, the operation of even a lower power facility creates a potential RF Radiation exposure liability to an uncontrolled general public. As a result, the instant STA request seeks permission to operate a temporary facility at a site on an adjacent building to preserve and even enhance service to the public.

Accordingly, it is respectfully requested that the station be granted Special Temporary Authority to operate the facilities requested herein on a temporary basis for a period not to exceed 180 days.
