ENGINEERING STATEMENT OF CYNTHIA M. JACOBSON, P.E.
IN SUPPORT OF AN
APPLICATION FOR CONSTRUCTION PERMIT
KDWN – LAS VEGAS, NEVADA
720 kHz – 25.0 kW DAY/4.0 kW NIGHT – DA-N
Facility ID: 54686

Applicant: Audacy License, LLC

I am a Consulting Engineer, an employee in the firm of Carl T. Jones Corporation, with offices located in Springfield, Virginia. My education and experience are a matter of record with the Federal Communications Commission. I am a Registered Professional Engineer in the Commonwealth of Virginia, Registration No. 0402027914.

GENERAL

This office has been authorized by Audacy License, LLC ("Audacy"), licensee of Standard Broadcast Station KDWN, Las Vegas, Nevada, to prepare this Engineering Statement, FCC Form 301 (Section III), and the attached figures in support of an Application for Construction Permit. The application requests relocation of the KDWN antenna system to the KXNT transmitter site. The KXNT site is located 18.5 kilometers at a bearing of 38.6° from the licensed KDWN transmitter site.

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KDWN – LAS VEGAS, NEVADA
Page 2

KDWN is presently licensed to operate on 720 kHz with a daytime power of 25.0 kW and a nighttime power of 7.5 kW.¹ The licensed daytime operation is non-directional while the licensed nighttime operation is directional, employing a three-tower array. The host station, KXNT is licensed to North Las Vegas, Nevada and operates on a frequency of 840 kHz, with a power of 50.0 kW during daytime hours and 25.0 kW during nighttime hours. The KXNT existing four-tower skewed parallelogram array is used for both the day and night directional operations, DA-2.

The instant application proposes a daytime non-directional operation from tower #2 of the KXNT array. KDWN will use towers #1, #3 and #4 of the existing five towers on the property for the proposed night directional operation. KDWN proposes to operate at a power of 25.0 kW during daytime hours and 4.0 kW during nighttime hours.²

ANTENNA SYSTEM

The instant application proposes the use of tower #2 (ASR #1059596) for the KDWN non-directional daytime operation. Towers #1, #3 and #4 (ASR #'s: 1059595, 1059597 and 1059598, respectively) will be used to generate the proposed KDWN night pattern. KDWN proposes operation at a power of 25.0 kW during daytime hours and 4.0 kW during nighttime hours. At KDWN's frequency of 720 kHz, the KXNT towers are 77.1 electrical degrees in height.

¹ KDWN has been “silent” since March 1, 2023, FCC File No. 0000211966.

² AM station KXST – 1140 kHz, North Las Vegas, Nevada will concurrently (or shortly thereafter) file an Application for Construction Permit to relocate to the KXNT site, resulting in a triplex operation.

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KDWN – LAS VEGAS, NEVADA
Page 3

The proposed nighttime horizontal plane standard radiation pattern is shown in the polar graph Figure 1. The nighttime horizontal plane inverse distance fields are tabulated in Figure 2. Figures 3 through 14 contain tabulations of the vertical inverse distance fields for the proposed nighttime pattern.

GROUND SYSTEM

The existing ground system consists of 120, 89.0 meter (0.214 wavelength), buried copper radials except where shortened due to property boundaries or where bonded to a transverse copper strap midway between adjacent towers. Due to the additional ground system around the existing towers that are not employed by the proposed KDWN day operation, an efficiency correction is not being applied to the nondirectional operation. Therefore, the proposed nondirectional daytime antenna Theoretical Efficiency will be 297.5 mV/m/kW at 1 km. It is also believed that the proposed directional antenna system will be fully efficient with the additional ground system of the unused towers. The proposed nighttime directional Theoretical RMS is calculated to be 618.6 mV/m at 1 km.

FAA NOTIFICATION AND TOWER REGISTRATION

Because KDWN is proposing to utilize the KXNT existing towers without physical alteration, it is believed that no further notification to the Federal Aviation Administration (FAA) is necessary.

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KDWN – LAS VEGAS, NEVADA
Page 4

The existing towers are 90.2 meters AGL (760.8 meters AMSL). The Tower Registration Numbers are: Tower #1 - 1059595; Tower #2 – 1059596; Tower #3 - 1059597; Tower #4 -1059598 and Tower #5 – 1059599.³

SITE AND SURROUNDING TERRAIN

The proposed antenna/transmitter location and surrounding terrain characteristics are contained in the FCC's files for KXNT. The proposed center-of-array coordinates, as specified by KXNT, are:

NAD-27 Coordinates

North Latitude: 36° 23' 53"
West Longitude: 114° 54' 57"

NAD-83 Coordinates

North Latitude: 36° 23' 52.9"
West Longitude: 114° 55' 00.0"

These coordinates will be used to define the proposed daytime nondirectional operation and the proposed nighttime directional operation.

BLANKETING AND STATION INTERACTION

The population within the proposed KDWN daytime and nighttime 1000 mV/m contours is less than 300 persons. The proposed 1000 mV/m contours are shown on the

³ Tower numbering corresponds to the KXNT tower numbering sequence and ASR.

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KDWN – LAS VEGAS, NEVADA
Page 5

map of Figure 15 and the proposed 25 mV/m contours are shown on the map of Figure 16. In response to all complaints of blanketing interference, the applicant will undertake steps to mitigate the interference in accordance with the requirements of Section 73.88 of the Commission's Rules and Regulations.

It is proposed to collocate KDWN at the KXNT site and diplex onto the KXNT antennas, resulting in a triplex operation.⁴ Filter and detuning networks will be installed by the applicant to minimize interaction between the three stations such that no adverse impact will result from the collocation of the two stations at the KXNT site. There are no other AM stations located within 3.2 kilometers of the proposed KDWN/KXST/KXNT site. There are three FM booster stations, and two FM auxiliary stations located within 10 kilometers of the proposed site. There are no TV stations located within 10 kilometers of the proposed site. It is expected that no detrimental interaction will occur with any station.

COVERAGE CONTOURS

The present and proposed daytime 5.0 mV/m service contours are shown on the map of Figure 17. The proposed daytime 5.0 mV/m contour encompasses 100% of the city of license, Las Vegas, Nevada, therefore Section 73.24(i) of the Rules is satisfied.

⁴ It is proposed to also co-locate AM station KXST-1140 kHz, North Las Vegas, Nevada at the KXNT site. An Application for Construction Permit will be filed concurrently or shortly thereafter.

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KDWN – LAS VEGAS, NEVADA
Page 6

The present and proposed 2.0 mV/m daytime contours are shown on the map of Figure 18.

The present and proposed nighttime service contours are shown on the maps of Figures 22-23. The proposed nighttime interference-free contour is 4.3 mV/m. In the instance where the nighttime interference-free contour is less than the 5.0 mV/m contour, the 5.0 mV/m is considered the nighttime service contour. The proposed 5.0 mV/m nighttime contour will encompass 100% of the city of license, see Figure 23. Thus, Section 73.24(i) of the FCC Rules is satisfied, though no longer a requirement at night for an existing licensed AM facility.

DAYTIME ALLOCATION STUDY

Six stations were considered in detail regarding the daytime allocation. These stations are:

KBMB	710 kHz	Black Canyon, Arizona;
KSPN	710 kHz	Los Angeles, California;
KFIA	710 kHz	Carmichael, California;
XENVA2	720 kHz	San Luis Rio Colorado, SO, Mexico;
KSVN	730 kHz	Ogden, Utah; and
XEEBC	730 kHz	Ensenada, BN, Mexico.

The map of Figure 20 depicts the daytime allocation situation for the above cited stations as they pertain to the present and proposed KDWN operations. The distances

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KDWN – LAS VEGAS, NEVADA
Page 7

to all groundwave contours were calculated using the equivalent distance method. Contours were calculated at 5 degree intervals using ground conductivity values shown on the FCC's M-3 soil conductivity map. Tabulations of distances to groundwave contours and conductivity profiles are not included herein, but can be provided upon request. A further breakdown of the daytime allocation by channel relationship is detailed below.

CO-CHANNEL PROTECTION

As depicted on the map of Figure 20A, there is overlap of the present and proposed KDWN 0.025 mV/m interfering contour with the 0.5 mV/m protected contour of XENVA2. Due to the site relocation away from XENVA2, the overlap is reduced with the proposal. The present overlap of the KDWN 0.5 mV/m protected contour with the 0.025 mV/m interfering contour of XENVA2 will also be reduced with the proposal.

FIRST-ADJACENT CHANNEL PROTECTION

The map of Figure 20B shows existing overlap between the present and proposed 0.25 mV/m interfering and 0.5 mV/m protected contours of KDWN and the 0.5 mV/m protected and 0.25 mV/m interfering contours of KBMB and KSPN. The instant proposal would decrease the current area of overlap of the 0.25 mV/m and 0.5 mV/m contours with respect to KBMB and KSPN.

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KDWN – LAS VEGAS, NEVADA
Page 8

A detailed view of the area of contour overlap with KBMB is shown on the map of Figure 20C. Detailed overlap studies were conducted to determine that the overall overlap area between KDWN and KBMB was not increased. The table below supports this conclusion.

	PRESENT OVERLAP	PROPOSED OVERLAP
Caused to KBMB	85,702 persons/23,413.6 sq. km	72,277 persons/22,408.7 sq. km
Received from KBMB	179,855 persons/23,059 sq. km	177,080 persons/21,083.5 sq. km

The map of Figure 20B confirms that there is no overlap between the present and proposed, protected and interfering contours with respect to first adjacent channel stations KFIA and KSVN. Figure 20B also indicates that there is no present or proposed overlap of the 0.5 mV/m contours between KDWN and XEEBC.

SECOND-ADJACENT CHANNEL PROTECTION

There are no second adjacent channel station within close proximity that warrant consideration.

THIRD-ADJACENT CHANNEL PROTECTION

There are no third adjacent channel stations within close proximity that warrant consideration.

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KDWN – LAS VEGAS, NEVADA
Page 9

NIGHTTIME ALLOCATION STUDY

Figure 21 is a tabulation of the present and proposed RSS calculations for co-channel and first-adjacent channel stations that may be impacted by the instant proposal. The proposed nighttime facility of KDWN will not raise the 25% or 50% RSS limit of any domestic station or the 50% RSS limit of any foreign station. Any protection towards a station resulting in a proposed margin greater than 1300 mV/m is not included in Figure 21. Based on the studies, the proposed KDWN nighttime facility is compliant with all current domestic and international nighttime allocations standards.

ENVIRONMENTAL IMPACT

This engineering statement certifies compliance with human exposure to radio-frequency radiation. The proposal described herein does not involve high intensity lighting as specified under Section 1.1307(a)(8), nor will it result in human exposure to radio-frequency radiation in excess of the standards specified in Section 1.1307(b).

RADIO-FREQUENCY IMPACT

On January 1, 1986, the FCC amended its Rules to implement the National Environmental Policy Act of 1969 (NEPA). This amendment established RF radiation protection guidelines to be used to determine if potentially harmful RF exposure is possible from an FCC-regulated transmission facility. Effective October 15, 1997, the FCC adopted revised guidelines and procedures for evaluating environmental effects of

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KDWN – LAS VEGAS, NEVADA
Page 10

RF emissions. These revised guidelines incorporate two tiers of exposure limits based on whether exposure occurs in a “controlled” (occupational) situation or an “uncontrolled” (general population) situation. The FCC has also revised OET Bulletin No. 65 entitled, “Evaluating Compliance with FCC Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields,” to aid in the radiation exposure analysis. This bulletin, as well as other current literature, provides detailed information for conducting an analysis including tables and mathematical equations that can be used to determine compliance with the Commission’s guidelines.

The proposed facility will be co-located with the 840 kHz operation of KXNT and the proposed 1140 kHz operation of KXST⁵ and thus is considered a multiple-use site.

CALCULATION METHODS

Verification of compliance with FCC-specified guidelines for human exposure to RF radiation was obtained from OET Bulletin No. 65.

Tables 1-3 of Supplement A to OET Bulletin 65 (Edition 97-01) provides compliance distances for tower heights of 0.1 wavelength, 0.25 wavelength and 0.5 wavelength. The electrical height of the existing towers at the KDWN frequency of 720 kHz is 0.214 wavelength. The electrical height of the existing towers at the KXST

⁵ Ibid.

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KDWN – LAS VEGAS, NEVADA
Page 11

frequency of 1140 kHz is 0.339 wavelength. At KXNT's frequency of 840 kHz, the antenna height is 0.25 wavelength. Assuming a worst case tower height of 0.214 wavelength and a worst case frequency range of 535-740 kHz, the minimum fencing requirements were interpolated from Tables 1 and 2.

The power breakdown for each operating mode in each tower is tabulated below:

DAY MODE (Power in Watts)

	#1 ASR #1059595	#2 ASR #1059596	#3 ASR #1059597	#4 ASR #1059598	#5 ASR #1059599
KXNT	16,967.6	24,244.2	-113.4	8,901.6	----
KDWN Proposed	----	25,000.0	----	----	----
KXST Proposed	10,791.2	----	1,208.8	----	----
TOTAL POWER	27,758.8	49,244.2	1,322.2	8,901.6	----

NIGHT MODE (Power in Watts)

	#1 ASR #1059595	#2 ASR #1059596	#3 ASR #1059597	#4 ASR #1059598	#5 ASR #1059599
KXNT	8,483.8	12,122.1	-56.7	4,450.8	----
KDWN Proposed	3,136.5	----	687.6	175.9	----
KXST Proposed	-----	63.1	36.9	0.3	----
TOTAL POWER	11,575.3	12,185.2	780.1	4,627.0	----

The daytime mode represents the highest power levels for all towers. The highest combined input power to any tower is 49,244.2 watts at the input to Tower #2 during the daytime operating mode. A fence of no less than 6.1 meters (assuming worst case assumptions as defined above) from the base of tower #2 would be compliant with the

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KDWN – LAS VEGAS, NEVADA
Page 12

radio-frequency energy requirements of the FCC regarding the occupational/controlled and the general population/uncontrolled MPE limits.

For Towers #1, #3 and #4, the maximum power also occurs during the day mode. Tower #5 is unused. A summary of the minimum necessary fencing requirements for all the used towers are:

Tower #1: 4.6 meters
Tower #2: 6.1 meters
Tower #3: 1.6 meters
Tower #4: 3.2 meters

The existing fencing will be modified if necessary to meet these fencing requirements. Each fence will be locked to preclude public access and appropriate warning signs will be installed on the fence. In addition, the perimeter of the tower site is fenced to prevent public access.

OCCUPATIONAL SAFETY

As stated above, access to the area surrounding the base of each of the KDWN/KXST/KXNT towers will be restricted to authorized maintenance personnel only. The licensee(s) of KDWN, KXST and KXNT will institute procedures to ensure protection of station personnel and tower contractors working on or in the immediate vicinity of the towers. Procedures will be followed during times of service or maintenance of the

STATEMENT OF CYNTHIA M. JACOBSON, P.E.
KDWN – LAS VEGAS, NEVADA
Page 13

transmission systems to ensure that personnel are not exposed to energy levels in excess of the maximum permissible exposure limit.

In light of the above, the proposed facility would be categorically excluded from RF environmental processing under Section 1.1307(b) of the Commission's Rules.

CONCLUSION

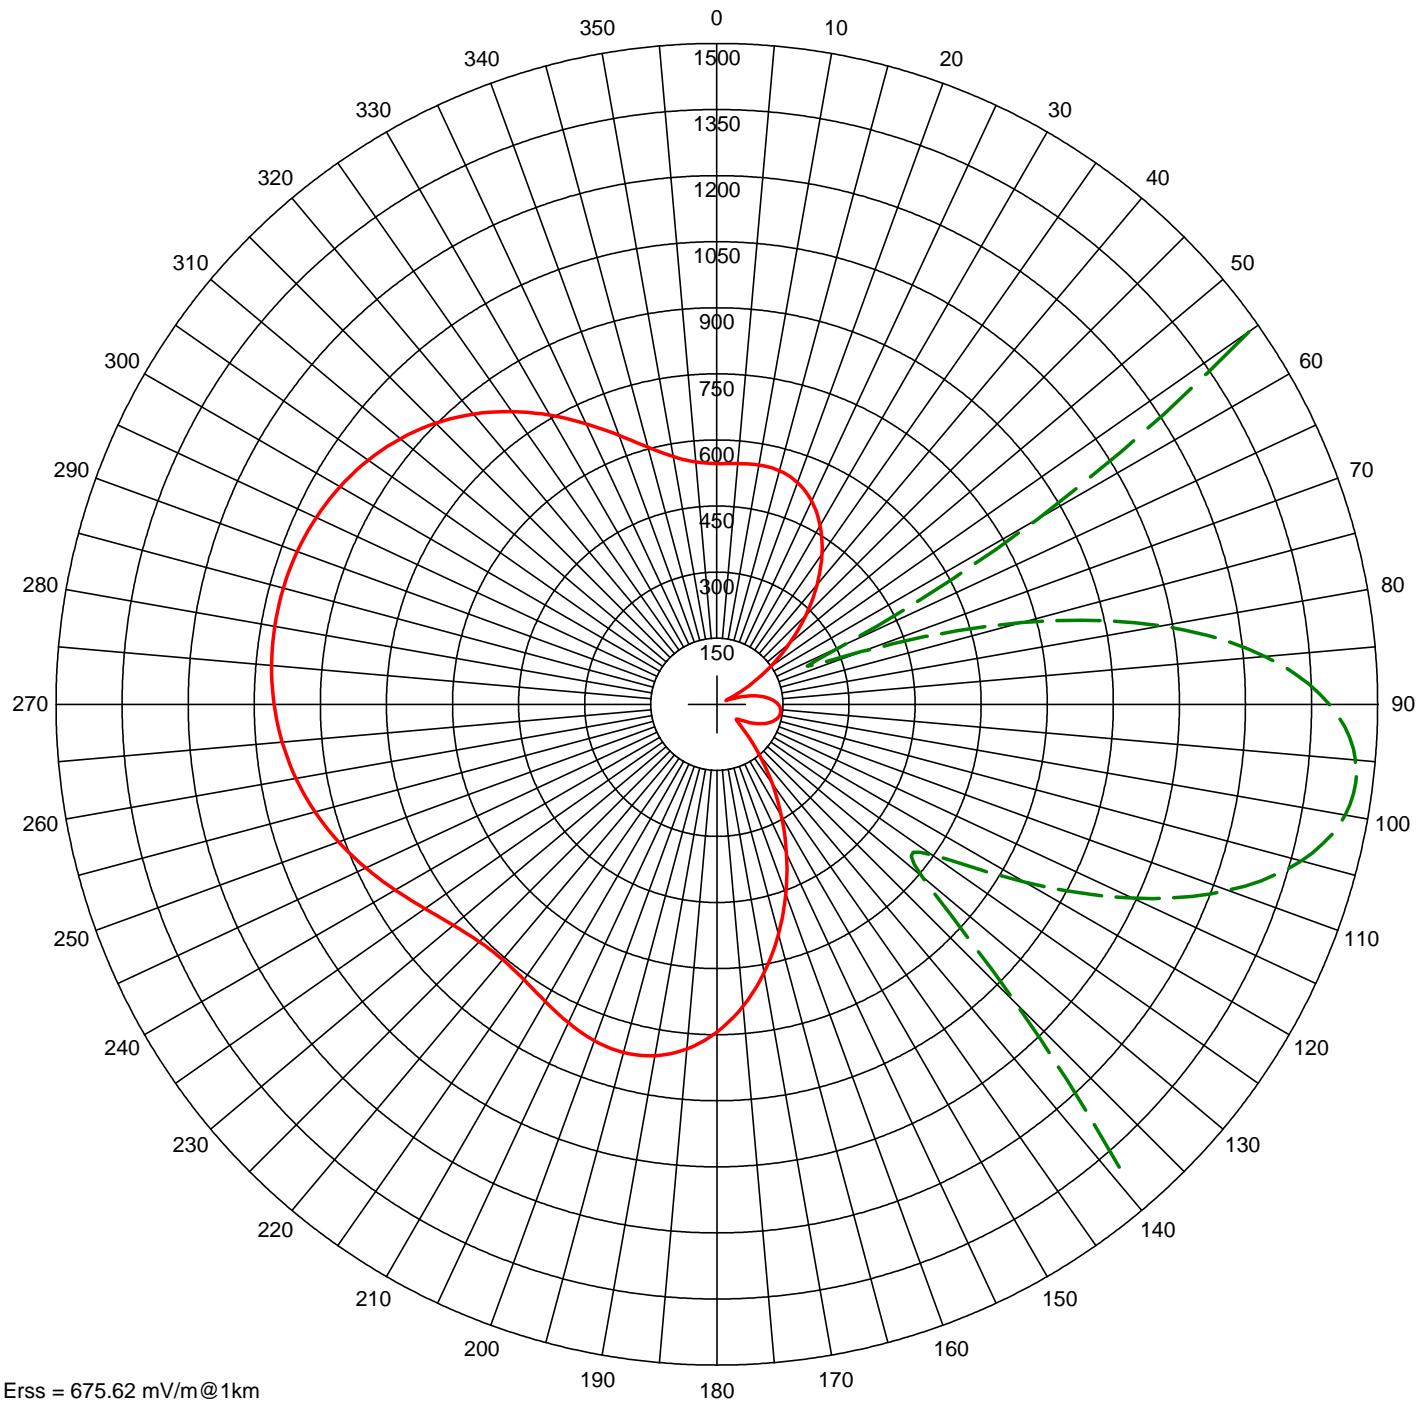

It is submitted that the proposed facility described herein would comply with the technical standards of the Commission's Rules and Regulations. This engineering statement, Section III of FCC Form 301, and the associated figures were prepared by me or under my direct supervision and are believed to be true and correct.
