## SUPPLEMENTAL EXHIBIT

This exhibit provides supplemental information for the minor mod for KDIN. This minor mod is filed to complement the FCC notification DA 23-1030A1 allowing the substitution of channel 34 for channel 11 in the DTV allotment table. The minor modification application to which this letter is attached requests KDIN to be assigned to that channel as this is in the public benefit.

Although the minor mod application does not allow the proposed transmission system to be described, this letter will address that question. Likewise, the attachments to this application will provide analysis that demonstrates the proposed facility meets all FCC requirements including city of license signal strength, interference analysis, and RF exposure limits.

### PROPOSED FACILITY

The proposed facility consists of a DTV transmitter compliant with all FCC equipment authorization rules, using a full service emission mask, rigid transmission line, and Omnidirectional antenna to develop the proposed 1 MW Effective Radiated Power associated with the allotment for channel 34. The proposed RCAMSL is 893 meters located at the following coordinates: 41+38+33n, 93-36-54 w. See the interference analysis and community of license coverage exhibits attached to the application for specific details regarding signal strength contour for the community of license and the particular interference created by the proposed facility and the resolution of that interference.

Should you have any questions, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Greg Best", followed by a stylized monogram or initials.
