

Reason for Amendment

This Amendment to pending LMS Application File No. 0000228040 is being filed at the request of Commission Staff to correct the height of radiation center above average terrain (“HAAT”) and provide additional information regarding the antenna model and polarization listed in the accompanying application. The HAAT has been corrected to 444 meters, which mirrors the underlying Rulemaking (*see* LMS File No. 0000216788). For the antenna, and as explained further on page 3 of the amended technical exhibit accompanying this application, the licensee has—of necessity—specified a slightly different antenna model in light of unanticipated structural constraints with the tower. However, the antenna described in the accompanying application does not materially differ from that listed in the underlying rulemaking for purposes of the technical specifics of the proposed operation—the only changes as compared to the rulemaking antenna are that the antenna listed in the accompanying application is one bay shorter and lacks vertical polarization.
