SECOND ADJACENT WAIVER REQUEST

WHZT is the second adjacent channel the facility is short spaced to.

License respectfully requests a "second adjacent channel waiver" with regards to Section 47 C.F.R. Section 73.807 of the FCC rules based upon the "Living Way" precedence (Living Way Ministries, Inc., Memorandum Opinion and Order, 17 FCC Red 17054, 17056, ¶ 5 (2002), recon. denied 23 FCC Red 15070 (2008)). This will be accomplished by used Free Space methodology of calculation.

Using U/D methodology, at the proposed transmitter location WHZT has a signal strength of 79.4 dBu. Interference will occur when the interfering signal exceeds the desired signal by 40 dbu. So the area of predicted interference would then be bounded by the 119.4 dBu contour.

The distance to this contour, using free space method:

$$D = (7.01 \cdot P^{1/2}) / E,$$

where P is power (watts), E is field strength (v/m), and D is distance to contour (meters):

$$P = 100 \text{ w}, E = 119.4 \text{ dBu} \quad D = 79.1 \text{ meters}$$

However, the field strength of the proposed LPFM's antenna system falls quickly at depression angles below the horizon. Using elevation pattern data provided by Shively (2 Bay 6812 $\frac{1}{2}$ wave spaced) the distance to the 119.4 dBu contour at various depression angles is tabulated below. The data shows that the lowest point at which the signal strength rises to 119.4 dBu is 9.8 meters below the center of radiation of the antenna system, or 2.9 meters above the ground. Therefore, this is sufficient clearance of the one-story structures, and the interference area encompasses zero population. The table below shows that the lowest elevation point of the 119.4 interfering contour is 2.9 meters above ground. Tree is adjacent to a one-story building

Due to zero population within this radiation radius, this meets the "Living Way" Criteria to qualify for a Waiver of 47 C.F.R. Section 73.807.

Thus, the applicant requests a second adjacent waiver based upon evidence no interference is proposed.
