SECOND ADJACENT WAIVER REQUEST

Applicant respectfully requests a "second adjacent channel waiver" with regards to Section 47 C.F.R. Section 73.807 of the FCC rules based upon the "Living Way" precedent (Living Way Ministries, Inc., Memorandum Opinion and Order, 17 FCC Red 17054, 17056, ¶ 5 (2002), recon. denied 23 FCC Red 15070 (2008)). This will be accomplished by using Free Space methodology of calculation.

The second adjacent channel is (with signal strength at the proposed site):

KZKX	LIC	245C1	73.3 dBu
KBBX-FM	LIC	249C1	73.7 dBu

Using U/D methodology, interference will occur when KZKX's signal strength's interfering signal exceeds the desired signal by 40 dBu. So the area of predicted interference would then be bounded by the 113.3 dBu contour.

The distance to this contour, using free space method:

$$D = (7.01 * P^{1/2}) / E,$$

where P is power (watts), E is field strength (v/m), and D is distance to contour (meters):

$$P = 50 \text{ w}, E = 113.3 \text{ dBu} \quad D = 107.9 \text{ meters}$$

However, the field strength of the proposed LPFM's antenna system falls quickly at depression angles below the horizon. Using elevation pattern data provided by Scala for a FMVMP antenna setup (3 bay 0.87 wave spaced) the distance to the 113.3 dBu contour at various depression angles is tabulated below. The data shows that the lowest point at which the signal strength rises to 113.3 dBu is 14.8 meters below the center of radiation of the antenna system, or 3.2 meters above the ground. Therefore, this is sufficient clearance from the one story mini mall/offices below. The table below shows that the lowest elevation point of the 113.3 F(50,10) interfering contour is 3.2 meters above ground.

Due to zero population within this radiation radius, this meets the "Living Way" Criteria to qualify for a Waiver of 47 C.F.R. Section 73.807.

Thus, the applicant requests a second adjacent waiver based upon evidence no interference is proposed.
