

Reasons for Amendment of Minor Mod. of Lic. App. - WTPM-LD

The Minor Lic. Mod. App of WTPM-LD TV is being amended to update the parameters of the ASRN 1010367, the RF and Environmental exhibit and the TVStudy of the proposal. As can be observed, the small change in parameters is not materially significant.

As can be observed in the included Figure 1, there will be ample service contour overlap between the licensed and proposed facilities, whose sites are 17.4 miles apart. As shown in the included TVStudy, done using a L-R cell size of 1.0 Km. and profile increment of 0.05 Km., no prohibitive interference will be caused to any other TV facility.
