Re: FM Directional Antenna Azimuth Certification, WFMA-FM, Marion Alabama

Mr. Speight,

Below are our results from on our field survey location of the existing guyed tower on January 8, 2023. This tower was field located utilizing survey grade Total Station angular and linear measurements in conjunction with Network Oriented GNSS observations to establish True North. These measurements are accurate within 0.07' linearly and 2° angularly.

A handwritten signature in black ink, appearing to read "G. Darrell Taylor", written over a horizontal line.
