

The Licensee requests an extension of Special Temporary Authority to operate using the facilities specified under the current STA. The station's broadcast tower collapsed when a logging truck collided with the guy anchor. In an effort to continue providing service to the public, the Licensee relocated the station's transmission facilities to a tower located approximately 200 yards from the destroyed tower. The station continues to work with the insurance company on its damage claim and is reviewing options to rebuild the tower. The Licensee requests continued authority to operate under STA parameters while it continues to pursue planning for rebuilding.
