

Request to EXTEND Special Temporary Authorization  
Cumulus Licensing LLC  
Station WNAM(AM), Neenah-Menasha, Wisconsin

**Request to Extend Special Temporary Authorization**

This filing, submitted on behalf of Cumulus Licensing LLC (“Cumulus”), licensee of Station WNAM(AM), Neenah-Menasha, Wisconsin, respectfully requests an extension of its Special Temporary Authorization, pursuant to Section 73.1635 of the Rules, to permit WNAM to use its nighttime pattern during daytime hours while experiencing a switching issue.

WNAM is licensed to operate on frequency 1280 kHz with five kiloWatts (5 kW) of power utilizing a four-tower directional array with different constants during daytime and nighttime hours. As previously reported, the Station’s switching mechanism will not allow WNAM to shift from its nighttime to its daytime pattern and remains out of commission. The Cumulus engineers analyzed the problem, ordered a contactor relay from Phasetek which is expected to resolve this problem, and are awaiting its delivery. Until the part is received and installed, Cumulus respectfully requests an extension of its Special Temporary Authorization so it may continue to operate with its nighttime pattern during daytime hours. This will allow WNAM to provide service to its listeners in and around Neenah-Menasha, Wisconsin.
