

AMENDMENT EXHIBIT

KCGK Assignment Application

The instant assignment application is hereby amended to include the following requisite items:

- Assignee Multiple Ownership Showing. *See Exhibit A, attached hereto.*
- Assignor Other Authorizations Showing. *See Exhibit B, attached hereto.*

EXHIBIT A

**Multiple Ownership Compliance
Proposed Assignment of
KCGK, Lutesville, MO FAC# 26174
March 6, 2024**

An engineering analysis was performed for Dockins Broadcast Group, LLC. (“DBGL”) to determine if the assignment of KCGK from Pure Word Broadcasting, LLC (“PWBL”) to DBGL meets the requirements of the multiple ownership rules. DBGL has attributable interest in KWKZ, the principal community contour of which intersects the principal community contour for KCGK. KWKZ and KCGK mutually intersect to form one “Radio Market”. Since this is not an Arbitron Metro Market, the interim contour-overlap methodology has been used to determine compliance with Section 73.3555.

The principal community contours of these 2 stations and all Dockins stations within 100km are plotted on the contour map attached as Figure 1.

Count of FM Stations in “Radio Market”

The number of non-commonly owned FM radio stations in the “Radio Market” was determined by counting the non-commonly owned authorized FM stations having 70dBμ F(50,50) contours that intersect the principal community contours which define the “Radio Market”. Only those non-commonly owned stations located within 92 kilometers of the perimeter of the mutual overlap area of the respective defined market area were employed in the count of the stations. Distances to the FM contours were determined based on the method of 47 CFR 73.313. The analysis of FM stations identified 32 non-commonly owned FM stations. Please refer to the attached table.

Count of AM Stations in “Radio Market”

The number of non-commonly owned AM radio stations in the “Radio Market” was determined by counting the licensed AM stations having 5 mV/m contours that intersect the principal community contours which define the “Radio Market”. Only those stations located within 92 kilometers of the perimeter of the mutual overlap area of the respective defined market area were employed in the count of the stations. Distances to the AM coverage contours were predicted using the antenna patterns as identified in the Commission’s AM database and the appropriate Ground Wave Field Strength versus Distance Graph of 47 CFR 73.184. The analysis of AM stations identified 16 non-commonly owned AM stations. Please refer to the attached table.

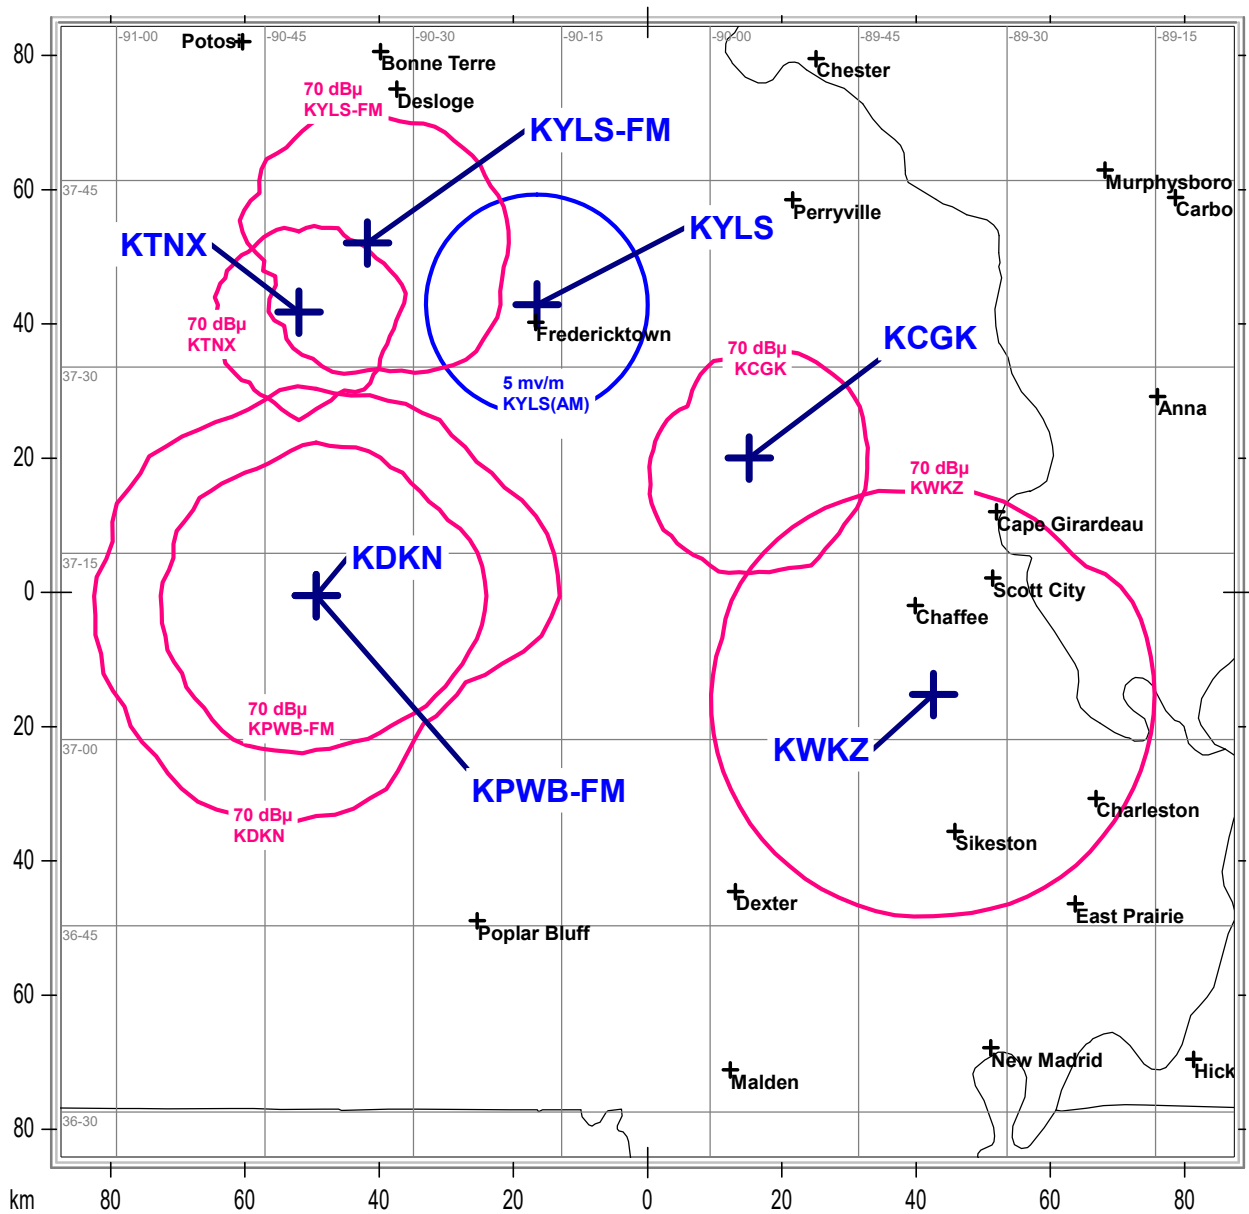

Conclusion

This analysis identified a total of 48 commercial and non-commercial full powered FM and AM stations in the “Radio Market”.

In a radio market with over 45 commercial and noncommercial educational full-power radio stations, DBGL may have a cognizable interest in up to 8 commercial radio stations, not more than 7 of which are in the same service (AM or FM).

The results of this analysis indicate the proposed assignment of KCGK(FM) meets the Multiple Ownership requirements of Section 73.3555(a) of the FCC Rules.
