

REASON FOR STA EXTENSION

Since the last extension of the KVTA (AM) STA, licensee, Gold Coast Broadcasting LLC, has made important progress in its effort to convert the station to a 1 kW non-DA operation. Licensee's consulting engineers, Hatfield & Dawson, have completed the necessary measurements and have completed the engineering portion of the application for this conversion to 1 kW non-DA. The application has now been filed with the FCC for processing and approval. Therefore, licensee respectfully requests an additional extension of the STA until the application is approved and licensee can move forward to complete the work on the conversion and resume normal operation under a new license authority.
