WGBL 96.7 FM, GULFPORT, MISSISSIPPI, FCC FACILITY ID 61305
ENGINEERING SHOWING

SUMMARY

TeleSouth Communications, Inc. (“Applicant”) is the licensee of WGBL 96.7 FM, FM Channel 244A, FCC Facility ID 61305, CDBS BLH-20060608AED, at Gulfport, Mississippi (“WGBL”). In this application, Applicant proposes to increase in power from a FM Class A facility to a (short-spaced) FM Class C3 facility from its existing antenna and tower location. A pending concurrently filed application by Educational Media Foundation, Assignee of Haddox Enterprises, LLC's WFFF 96.7 FM at Columbia, Mississippi (LMS Application ID 0000240434, FCC Facility ID 25817), proposes to relocate WFFF-FM from Columbia to Bogue Chitto, Mississippi. Once granted, WFFF-FM's move from Columbia to Bogue Chitto will allow WGBL to increase in class from FM Channel 244A to FM Channel 244C3. Finally, Applicant asks the Commission to make a slight coordinate modification to the currently vacant FM Class 245A allocation associated with the former DWXAB (FCC Facility ID 12815) at McLain, Mississippi. A fully spaced allotment site exists for this allocation to the northeast of its present coordinates, that if relocated, will allow WGBL a more meaningful increase in effective radiated power and associated larger primary service area.

SECTION 73.315 SHOWING – PROPOSED FACILITY - WGBL

The facility proposed herein, which is spaced under Section 73.215 of the Commission's Rules, would serve all of the Gulfport community within a F(50,50) 70 dBu contour.

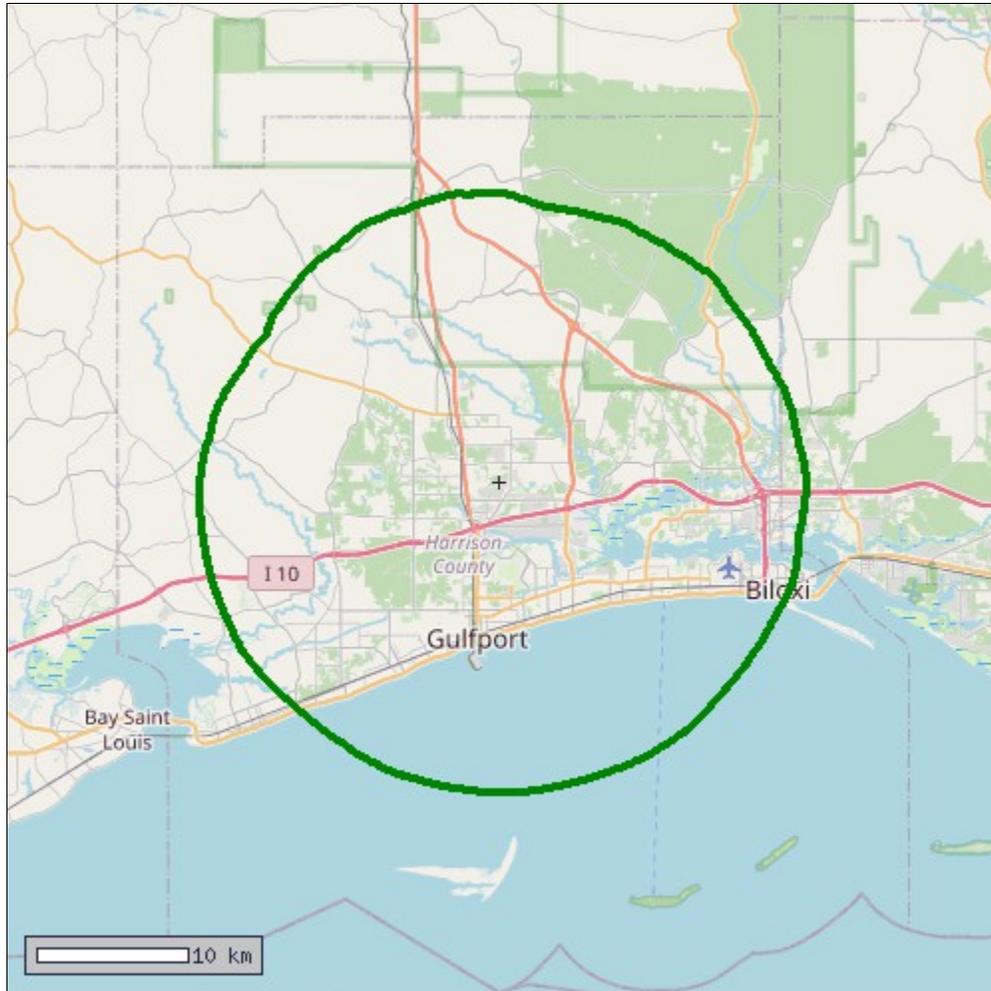

FIGURE 1: The map above depicts the F(50,50) 70 dBu contour of WGBL using the facilities contemplated in the application herein. As shown above, the facility would provide 70 dBu city grade service to the entire community of Gulfport, Mississippi.

MUTUALLY-EXCLUSIVE SHOWING – LICENSED VERSUS PROPOSED SITE

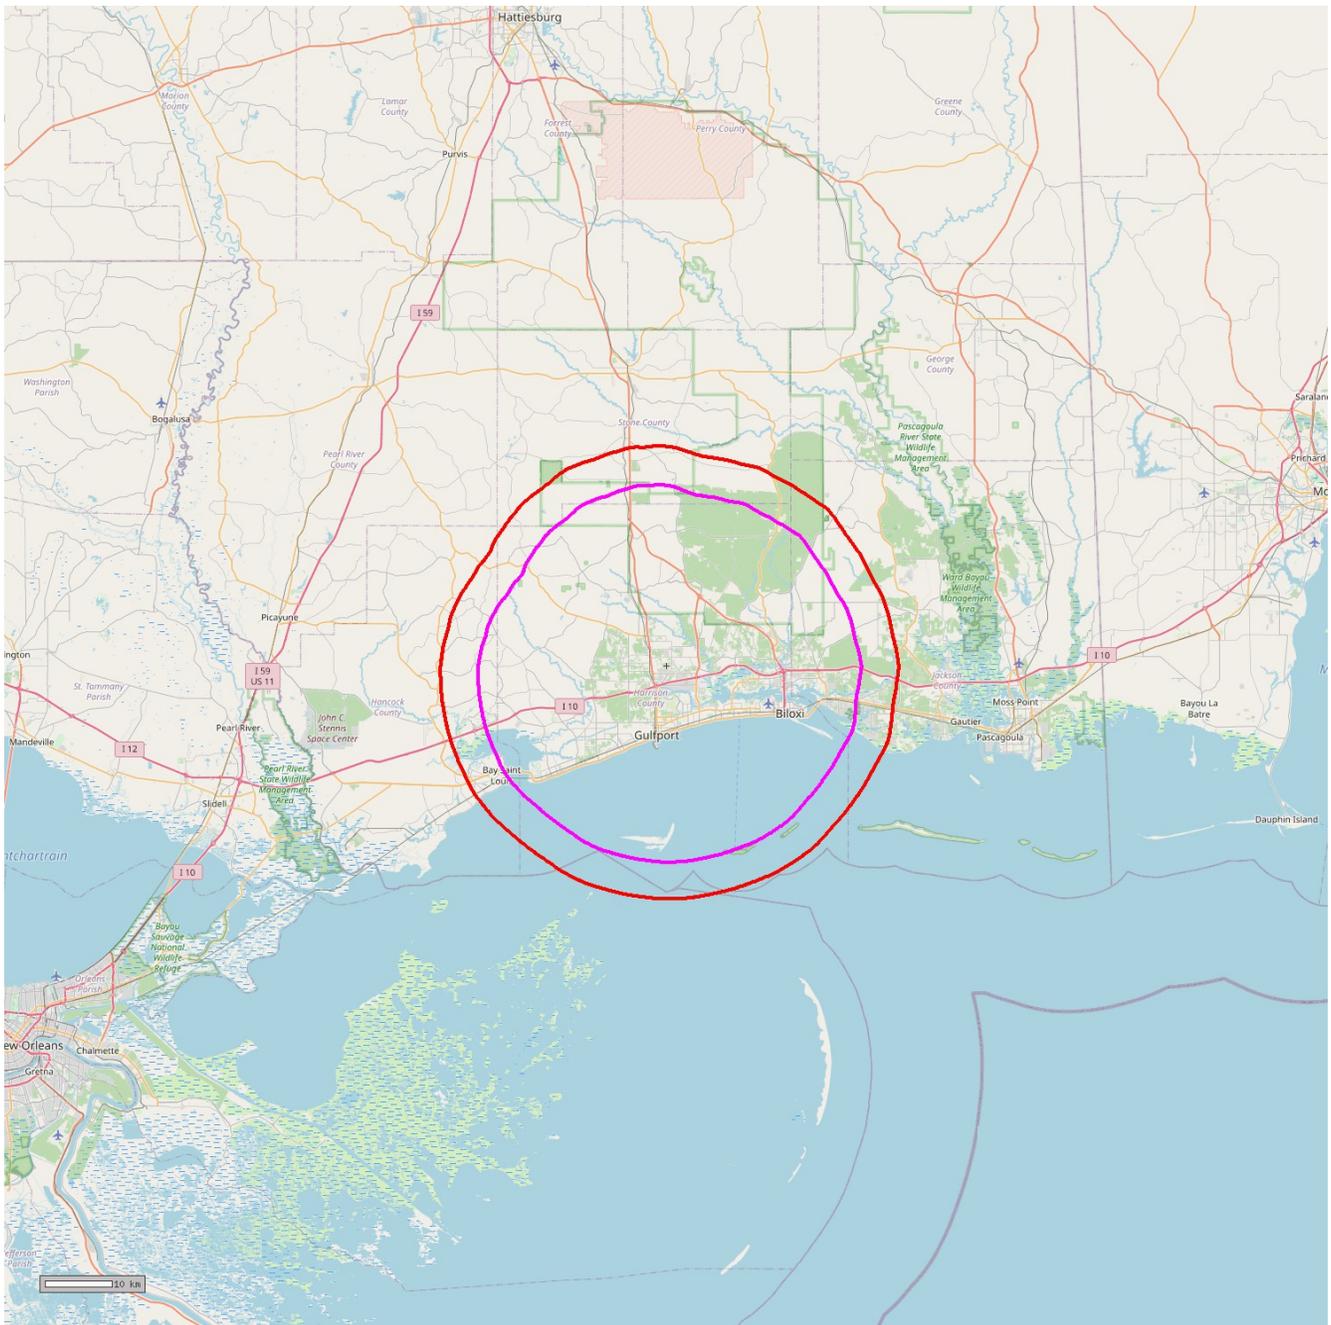

FIGURE 5: The map above depicts the F(50,50) 60 dBu contour of the proposed WGBL facility (red) and the F(50,50) 60 dBu contour of the licensed WGBL facility (purple). As shown, there is substantial overlap between the two facilities. Applicant respectfully asserts that the licensed and proposed facilities are mutually-exclusive to each other, and therefore, the proposal herein represents a minor change application.

SECTION 73.315 SHOWING – PROPOSED ALLOCATION COORDINATES - DWXAB

In order to facilitate the most meaningful available upgrade of the WGBL facility proposed herein, Applicant respectfully requests that the Commission relocate the currently vacant allocation coordinates associated with the former DWXAB 96.9 FM on FM Channel 245A at McLain, Mississippi to a site just to the northeast of its present position, at 31-05-54 North Latitude, 88-41-55 West Longitude (NAD 83). A fully spaced Class A FM allocation from this site would serve 100% of the McLain community within a F(50,50) 70 dBu contour.

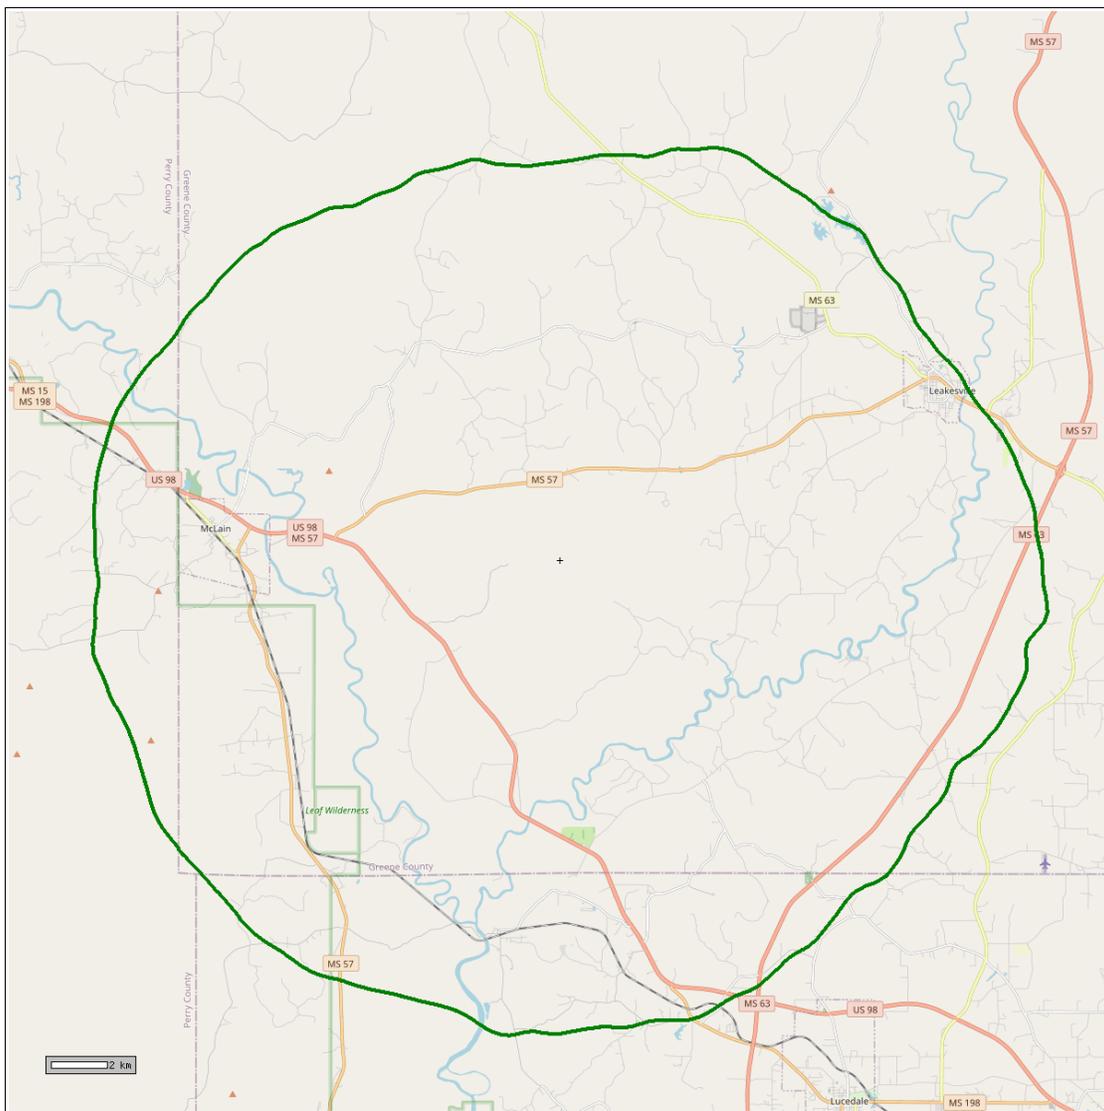

FIGURE 6: The map above depicts the F(50,50) 70 dBu contour of the proposed DWXAB vacant fully spaced allocation coordinates for a future station on FM Class 245A. As shown above, the fully spaced allocation coordinates would provide 70 dBu city grade service to the entire community of McLain, Mississippi.

* - This is the WGBL facility proposed herein, which would be licensed under Section 73.215

RF EXPOSURE SHOWING

In determining RF Exposure at the proposed antenna site, Applicant utilized the Commission's FM Model software, as shown below in Figure 8. Applicant specified a two element circularly polarized full-wave spaced EPA Type 1 FM antenna that accounts for the proposed WGBL 96.7 FM facility.

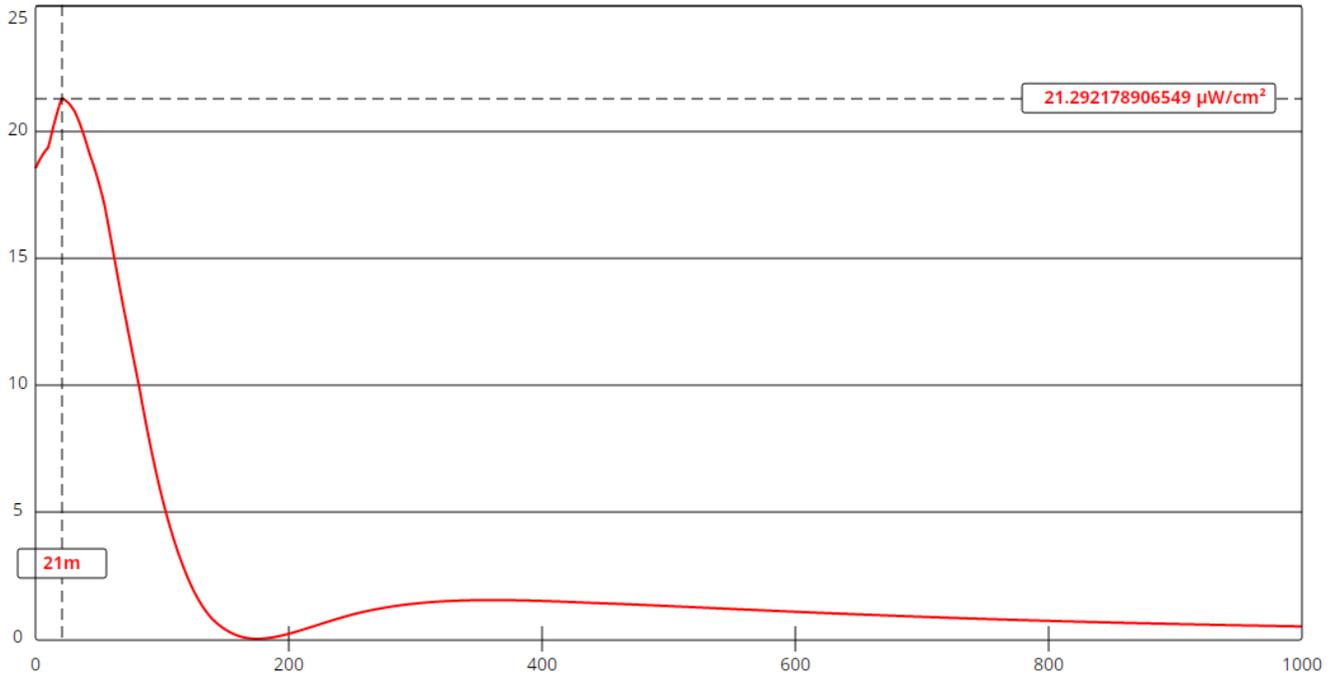

FIGURE 8: The above chart represents RF exposure in microwatts per square centimeter (vertical axis) against the distance from the radiating elements (horizontal axis) in meters. Radiation under the acceptable level of 20.0 microwatts per square centimeter at all points further than 39.0 meters from the broadcast antenna. As this radiation occurs only significantly above ground level, Applicant respectfully asserts that radiation exposure will not present a hazard to any individual near the proposed tower location. Signage alerting persons to the potential RF hazards at the site will be placed around the base of the tower's fence enclosure. Additionally, Applicant will limit power or cease transmitting in the event that personnel must be located closer to the transmitter site.
