

### **Engineering STA Extension Exhibit**

Licensee continues to operate WLLQ at reduced daytime power, currently of 250 watts, due to transmitter damage. Despite its best efforts, Licensee's ongoing financial constraints continue to delay progress. Licensee remains committed to improving its financial situation so that it can return WLLQ to full-power operations as soon as possible. In the meantime, Licensee respectfully requests an extension of this Special Temporary Authority to operate at reduced daytime power of 250 watts.
