

ENGINEERING STA EXHIBIT

Civic Media, Inc. ("Licensee"), licensee of W255DN (Fac. ID No. 200651), Wausau, WI (the "Translator") respectfully requests an engineering special temporary authority ("STA") to continue operating the Translator at reduced power. The translator has been operating pursuant to an STA (File Number 0000242580) using a damaged antenna and mount with reduced power. This STA request is to continue operating at reduced power, but with a new 2-bay non-directional antenna (new mounting hardware) with the same center of radiation (the old antenna was severely damaged by a windstorm that damaged the translator's antenna mount beyond reasonable repair).

Licensee was granted a minor modification application (File No. 0000240643) to install a new antenna and return the Translator to licensed operations. Before it can resume operations with the construction permit ("CP") facility, Licensee must satisfy the special conditions on the permit and prepare the application for license to cover.

A grant of the requested STA will allow the station to remain on the air providing service to the public which such efforts progress. Licensee respectfully requests an STA for 120 days while it works diligently towards returning the Translator to licensed operations.
