

## **Reasons for Engineering STA App. - WTPM-LD**

WTPM-LD has a CP authorization (FCC File Num. 0000217713) to change site. The station needs to acquire and install a new transmission line and upgrade the transmitter equipment power. In the meantime, the station wishes to commence operations from the CP authorized site, using the same CP specified antenna, filter, and antenna orientation, but at a reduced antenna RC and ERP.

There will still be ample service contour overlap between the proposed facility and the licensed operation, and the proposed reduced CP facilities will ensure that no prohibitive interference will be caused to any other TV facility. A six-month duration is requested for this Eng. STA to allow the applicant sufficient time to fully construct the authorized CP facilities.
