

Environmental Considerations

prepared by Guy Smith in connection with Minor
Modification Application for K47IP, Snyder TX

This proposal does not involve any changes whatsoever outside the transmitter shelter other than the reduction of ERP from 9.31 kW analog to 931 W digital. Consequently, there can be no adverse environmental effects.

Ramar Communications has a long standing policy in place to reduce power and/or shut down transmitters, as required, when workers are on the tower, to prevent exposure of workers to excessive RF levels.
