

Structural Standard

In response to Items 2(d)(1 and 2), Licensee has selected "Other," which necessitates the inclusion of an exhibit. This exhibit is to indicate that due to its short height of 60 feet, small panel, yagi and two way radio antenna's mounted on it, there is minimal dead weight and wind loading. The tower owner as well as tenants have done self-inspections on the condition of all hardware. The last self-inspection was done on May 10, 2015.
