

Antenna Type

This exhibit is being included to provide additional information about the station's antenna and support structure. The KITV channel 40 antenna is 2 groups of 3 panels, stacked and mounted on the existing KITV analog VHF channel 4 mast support structure which had a set of batwings attached. The channel 40 UHF panels are mounted low on the mast at a point that is below the lowest set of batwings. The mast is mounted to a lower floor just beneath the rooftop of the Ala Moana Hotel.
