

General Statement

The WMNN-LD facility has been built in accordance with the provisions of Construction Permit File No. BPDTL-20130916AER, as modified, with the exception of the antenna height. Structural issues required the antenna to be mounted at 118.9 meters above ground rather than the 121.9 meters specified in the permit. This would also place the Center of Radiation at 563.9 meters AMSL rather than 566.9 meters.

This variation is within the generally accepted tolerance of $\pm 2/-4$ meters specified in §73.1690(c)(1). Thus, it is believed this can be corrected in the license application without the requirement for a new or modified construction permit.
