Engineering Statement

Ch 24 Panama City, FL FI 181518

The within application amendment is filed to clear an MX situation between the original application and applications filed by others in connection with the 2009 new application LPTV window. The other applications are BNPDTL-20090825ASZ, FI 181602 and BNPDTL-20090825ANN, FI 181618. The within applicant agrees to accept interference from these two file numbers; further, the following revisions are made in the original application: Antenna changed from MCI 955314 rotated to 155° and mounted at 100M AGL to SCA PR-450CU rotated to 120° and mounted at 40M AGL. ERP is revised from 15 kW to 5 kW. Emission mask is revised to FULL SERVICE mask. NIER remains below 5% of the limit for this service. A study using OET69 methodology shows continued compliance with all pertinent portions of §74.793, including the above-listed applications which were previously MX with the original application for New, FI 181518.

Respectfully submitted,

B. W. St. Clair
