#### Reduced Power Notification Exhibit

Connecticut Public Broadcasting, Inc. (CPBI) observed on May 4, 2017 that the transmitter for Station WEDY, New Haven malfunctioned, operating at randomly fluctuating power between 50% and 100%. CPBI has worked with the manufacturer Comark to stabilize power at 64% as of May 8, 2017. A power amp is being repaired by Comark and it is anticipated that full power operation will be restored in the short term. CPBI will advise the Commission accordingly.
