

Environmental Assessment Exhibit

KXLK-CD proposes to replace our existing antenna on this tower with the same type and model of the existing antenna. The new antenna will be tuned to CH24. No modifications will be made to the existing tower. Therefore a new environmental assessment is not needed

KXLK-CD certifies that it, in coordination with other users of each transmitter site, will reduce power or cease operation as necessary to protect persons having access to each site, transmitter or antenna from radio frequency electromagnetic exposure in excess of FCC guidelines.
