

## **Application Amendment**

The instant application amends FCC File No: 0000027234 to modify the proposed ERP from 32.5kW to 29.4kW. The reduced ERP is also reflected in the updated Construction Permit RFR Certification and TVStudy Allocation Analysis attachments. No other changes are proposed.

### **Background**

On July 11, 2017 an informal email originating from the FCC indicated that all Canadian Boarder stations must propose facilities that do not exceed the allotted contour in any direction.

### **Amendment**

FCC File No.: 0000027234 originally proposed an ERP which is compliant with the FCC 1% expansion criteria, but is not compliant with the informally announced Canadian Broader proximity coverage criteria. The instant amendment reduces the ERP such that the proposed contour does not exceed the allotted contour in any direction, thus bringing the facility within compliance of the newly mandated coverage criteria.
