August 14, 2017

The applicant requests a waiver from the requirement to have an antenna structure registration number. A “determination of no hazard to aircraft navigation” (2015-ANM-3883-OE) has been issued for this structure but that document has an error of 42 feet for the site elevation. An ASR application was filed but was rejected due to this error. The applicant is currently in the process of correcting the ANM and once that is done the ASR application will be filed again.

Because of the T-Mobile 120 day notice the displacement application must be filed now and the ASR number will not be issued in time.

This structure is only 43 feet tall and according to a TOWAIR study it fails the FAA required 100:1 slope to the Yakima airport by only 682 feet distance from that airport runway so it comes very close to being exempt from registration requirements.

A handwritten signature in cursive script that reads "Daniel L. Mooney".

Daniel Mooney  
technical consultant
