Incentive Auction Channel Reassignment

Amendment to Application for Digital Television Station Construction Permit (File# 0000025584)

prepared for

Ohio University
WOUC-TV Cambridge, OH
Facility ID 50141
Ch. 6 1.08 kW 338 m

Ohio University (“Ohio”) is the licensee of digital television station WOUC-TV, Channel 35, Facility ID 50141, Cambridge, OH. Reassignment of WOUC-TV from Channel 35 to Channel 6 was specified in the *Incentive Auction Closing and Channel Reassignment Public Notice* (“*CCRPN*”, DA 17-317, released April 13, 2017). *Ohio* has filed an application for construction permit (file# 0000025584) to implement the WOUC-TV post-auction facility on Channel 6. The pending application specifies operation with a directional antenna having maximum effective radiated power (“ERP”) of 7.11 kW at 338 meters antenna height above average terrain (“HAAT”). The facility as specified in the pending application complies fully with §73.3700(b)(1)(iii).

The pending application results in an extension of noise limited service contour (“NLSC”) that exceeds a distance of one percent beyond that of the *CCRPN* facility. Pursuant to §73.3700(b)(1)(ii), the one percent extension distance is applicable to stations reassigned to another channel within the same band. WOUC-TV is a band change station (from UHF to Low-VHF), and the relevant rule is §73.3700(b)(1)(iii) which does not require the initial construction permit application facility to be limited by the one percent extension distance. Nevertheless, the applicant has been advised by FCC staff that the pending application must be amended to conform to the one percent contour extension limit. The site location is within the Canadian coordination zone (200 km to the Canada border) and staff reports that Canada has consented only to a maximum of one percent contour extension for directional reassigned stations. *Ohio* herein amends the application to reduce the ERP to 1.08 kW.

The proposed Channel 6 operation will employ a new antenna system to be side-mounted on the WOUC-TV tower. The tower structure corresponds to FCC Antenna Structure Registration number 1008520. No change to the overall structure height will result.

The proposed antenna is an elliptically polarized directional Dielectric model CBRA-C4-3/10M-1 (25 percent vertical polarization). *Ohio* proposes to operate WOUC-TV with an effective radiated power (“ERP”) of 1.08 kW at 338 meters antenna height above average terrain (“HAAT”). The maximum horizontally polarized ERP is 1.08 kW and the maximum vertically polarized ERP is 0.27 kW. The vertically polarized component will not exceed the horizontally polarized component at any azimuth. The directional antenna’s azimuthal patterns are depicted in Figures 1 and 1A for horizontal and vertical polarization, respectively.

The proposed antenna system has panel-type radiators oriented in four different azimuths, which will be side-mounted around the tower structure. The directional pattern has a “cardioid” shape intended to emphasize signal levels north, west, and south, while providing reduced power towards the east to avoid creating impermissible interference to other television stations on the same and adjacent channels.

In order to achieve the desired horizontal plane radiation pattern, the number of stacked panel layers at each azimuth is varied. A stack of 3 panels is used at the north, west, and south directions (9 panels total), while a single panel will be oriented to the east where reduced power is required. Electrical beamtilt of 0.75 degree is employed for the dominant stacks (north, west, and south) and there is no beamtilt for east panel. The amount of beamtilt specified in the accompanying FCC Form 2100 Antenna Technical Data section is given as 0.75 degree as that represents the beamtilt along the azimuths of maximum radiation. Elevation pattern plots and data are provided in Figure 2 for the north, west, and south faces, and in Figure 2A for east face.¹

¹As discussed informally with FCC Staff, a response of “No” is provided in the accompanying Form 2100 Antenna Technical Data section question regarding whether the elevation pattern varies for reasons other than the use of mechanical beamtilt. A “yes” response would prompt the upload of pattern data in XML format, a feature which is primarily intended to be associated with DTS facilities. This application does not rely on specific elevation pattern data to comply with coverage or interference requirements; therefore use of the default elevation pattern can be utilized.

A map is supplied as Figure 3 which depicts the standard predicted coverage contours. This map includes the location of Cambridge, WOUC-TV's principal community. As demonstrated thereon, the proposed facility complies with §73.625(a)(1) as the entire principal community will be encompassed by the 35 dB μ contour.

Interference study per FCC OET Bulletin 69² shows that the proposal complies with the 0.5 percent limit of new interference caused to pertinent nearby post-auction full service and Class A television stations and reassessments as required by §73.616. The interference study output report is provided as Table 1. This satisfies §73.3700(b)(iii) for the proposed NLSC extension.

The proposed NLSC extends beyond that of the *CCRPN* parameters of 1.72 kW ERP and 385 meters HAAT along a few azimuths. The *CCRPN* facility specifies the directional antenna pattern corresponding to the WOUC-TV's licensed Channel 35. Due to unavoidable pattern variations between UHF and VHF antennas, WOUC-TV cannot obtain an antenna that replicates the coverage contour reflected in the *CCRPN*. The amount of NLSC extension does not exceed one percent in any direction, and in most directions falls far short of the target *CCRPN* contour. Figure 4 supplies a coverage contour comparison of the proposed WOUC-TV facility to the reassignment facility's contour and a one percent extension distance of the reassignment facility's contour.

The proposed WOUC-TV facility's terrain-limited population provides an 86.6 percent match of the *CCRPN* baseline facility, as detailed in the following table.

Terrain Limited Population - Match of Reassignment

Population Summary (2010 Census) OET Bulletin 69: TVStudy	Reassignment Parameters	Proposed
Within Noise Limited Contour	1,256,827	1,096,058
Not affected by terrain losses	1,226,752	1,062,270
Match of Reassignment	---	86.59%

²FCC Office of Engineering and Technology Bulletin number 69, *Longley-Rice Methodology for Evaluating TV Coverage and Interference*, February 6, 2004 ("OET-69"). This analysis employed the FCC's current "TVStudy" software with the default application processing template settings, 2 km cell size, and 1 km terrain increment. Comparisons of various results of this computer program (run on a Mac processor) to the FCCs implementation of TVStudy show excellent correlation.

The population match is less than the 95 percent required for expedited processing. The shortfall is due to the mismatch of directional antenna patterns between the UHF and VHF bands. The proposal as originally submitted (at 7.11 kW ERP) easily complied with the minimum 95 percent population match. The reduction specified herein is made at the request of FCC staff and specifies the maximum ERP possible that does not exceed a one percent contour extension distance. *Ohio* will apply for an expanded WOUC-TV at the appropriate expansion window, and such facility will comply with the 95 percent population match benchmark.

The nearest FCC monitoring station is 397 km distant at Laurel, MD. This exceeds by a large margin the threshold minimum distance specified in §73.1030(c)(3) that would suggest consideration of the monitoring station. The site is not located within the areas requiring coordination with “quiet” zones specified in §73.1030(a) and (b). There are no authorized AM stations within 3 kilometers of the site.

Human Exposure to Radiofrequency Electromagnetic Field (Environmental)

The proposed operation was evaluated for human exposure to RF energy using the procedures outlined in the FCC’s OET Bulletin Number 65. Based on OET-65 equation (10), and considering the worst-case of 100 percent antenna relative field in downward elevations, the calculated signal density near the tower at two meters above ground level attributable to the proposed facility is $0.5 \mu\text{W}/\text{cm}^2$, which is 0.2 percent of the general population/uncontrolled maximum permitted exposure limit. This is well below the five percent threshold limit described in §1.1307(b) regarding sites with multiple emitters, categorically excluding the applicant from responsibility for taking any corrective action in the areas where the proposal’s contribution is less than five percent. The calculated signal density will be even lower when the antenna’s elevation pattern is considered.

The general public will not be exposed to RF levels attributable to the proposal in excess of the FCC’s guidelines. RF exposure warning signs will continue to be posted. With respect to worker safety, the applicant will coordinate exposure procedures with all pertinent stations and will reduce power or cease operation as necessary to protect persons having access to the site, tower, or antenna from RF electromagnetic field exposure in excess of FCC guidelines. This

exhibit is limited to the evaluation of exposure to RF electromagnetic field. No increase in structure height is proposed.

 (page 1 of 3)

tvstudy v2.2.3 (DAezul)
 Database: localhost, Study: WOUC-TV APP at 1.08 kW amend, Model: Longley-Rice
 Start: 2017.08.22 11:54:33

Study created: 2017.08.22 11:54:13

Study build station data: LMS TV 2017-08-22 LMSTV

Proposal: WOUC-TV D6 DT APP CAMBRIDGE, OH
 File number: WOUC-TV APP at 1.08 kW
 Facility ID: 50141
 Station data: User record
 Record ID: 963
 Country: U.S.
 Zone: I

Stations affected by proposal:

Call	Chan	Svc	Status	City, State	File Number	Distance
WDTV	D5	DT	LIC	WESTON, WV	BLCDT20090612AJX	119.5 km
WKBS-TV	D6	DT	CP	ALTOONA, PA	BLANK0000026455	247.0
WKBS-TV	D6	DT	BL	ALTOONA, PA	DTVBL13929	247.0

No non-directional AM stations found within 0.8 km

No directional AM stations found within 3.2 km

Record parameters as studied:

Channel: D6
 Latitude: 40 5 32.00 N (NAD83)
 Longitude: 81 17 18.00 W
 Height AMSL: 655.2 m
 HAAT: 337.8 m
 Peak ERP: 1.08 kW
 Antenna: DIE-CBRA-C4-3/10M-1 (ID 1001439) 0.0 deg
 Elec Pattrn: Generic
 Elec Tilt: 0.75

28.0 dBu contour:

Azimuth	ERP	HAAT	Distance
0.0 deg	1.05 kW	346.4 m	89.6 km
45.0	0.491	340.9	83.4
90.0	0.112	321.5	69.6
135.0	0.327	296.7	77.2
180.0	1.06	337.5	89.3
225.0	0.900	362.4	89.1
270.0	1.05	360.5	90.2
315.0	0.900	336.4	88.0

Proposal service area is within baseline plus 1.0%

**Proposal service area population is less than 95.0% of baseline

**Proposal is within coordination distance of Canadian border
 Distance to Canadian border: 199.2 km

Distance to Mexican border: 2134.6 km

Conditions at FCC monitoring station: Laurel MD
 Bearing: 103.6 degrees Distance: 396.0 km

Proposal is not within the West Virginia quiet zone area

Conditions at Table Mountain receiving zone:
 Bearing: 278.0 degrees Distance: 2028.3 km

Study cell size: 2.00 km

Profile point spacing: 1.00 km

Maximum new IX to full-service and Class A: 0.50%

Maximum new IX to LPTV: 2.00%

Channel and Facility Information	Section	Question	Response
Proposed Community of License	Facility ID	50141	
	State	Ohio	
	City	CAMBRIDGE	
	DTV Channel	6	
Facility Type	Facility Type	Noncommercial Educational	
	Station Type	Main	
Zone	Zone	1	

Antenna Location Data	Section	Question	Response
Antenna Structure Registration	Do you have an FCC Antenna Structure Registration (ASR) Number?	Yes	
	ASR Number	1008520	
Coordinates (NAD83)	Latitude	40° 05' 32.0" N+	
	Longitude	081° 17' 18.0" W-	
	Structure Type	TOWER-A free standing or guyed struct	
	Overall Structure Height	363.9 meters	
	Support Structure Height	356.7 meters	
	Ground Elevation (AMSL)	341.3 meters	
Antenna Data	Height of Radiation Center Above Ground Level	313.9 meters	
	Height of Radiation Center Above Average Terrain	337.8 meters	
	Height of Radiation Center Above Mean Sea Level	655.2 meters	
	Effective Radiated Power	1.08 kW	

Antenna Technical Data	Section	Question	Response
	Antenna Type	Antenna Type	Directional Custom
		Do you have an Antenna ID?	No
		Antenna ID	
	Antenna Manufacturer and Model	Manufacturer:	DIE
		Model	CBRA-C4-3/10M-1
		Rotation	0 degrees
		Electrical Beam Tilt	0.75
		Mechanical Beam Tilt	Not Applicable
		toward azimuth	
		Polarization	Elliptical
	DTV and DTS: Elevation Pattern	Does the proposed antenna propose elevation radiation patterns that vary with azimuth for reasons other than the use of mechanical beam tilt?	No
		Uploaded file for elevation antenna (or radiation) pattern data	

Directional Antenna Relative Field Values (Pre-rotated Pattern)

Degree	V _A (Authorized Value)						
0	0.987	90	0.322	180	0.990	270	0.987
10	0.990	100	0.322	190	0.987	280	0.987
20	0.915	110	0.268	200	0.888	290	0.888
30	0.806	120	0.297	210	0.810	300	0.810
40	0.720	130	0.472	220	0.880	310	0.880
50	0.629	140	0.629	230	0.946	320	0.946
60	0.472	150	0.720	240	0.880	330	0.880
70	0.297	160	0.806	250	0.810	340	0.810
80	0.268	170	0.915	260	0.888	350	0.888

Additional Azimuths

Degree	V _A
95	0.330
5	1.000
275	1.000
185	1.000

Construction Permit Certifications	Section	Question	Response
	Post-Incentive Auction Expedited Processing	<p>It will operate on the DTV channel for this station as established in the post-incentive auction channel reassignment public notice.</p> <p>It will operate post-incentive auction facilities that do not expand the noise-limited service contour in any direction beyond that established by the post-incentive auction channel reassignment public notice.</p> <p>It will operate post-incentive auction facilities that match or reduce by no more than five percent with respect to predicted population from those defined in the post-incentive auction channel reassignment public notice.</p> <p>The antenna structure to be used by this facility has been registered by the Commission and will not require re-registration to support the proposed antenna, OR the FAA has previously determined that the proposed structure will not adversely affect safety in air navigation and this structure qualifies for later registration under the Commission's phased registration plan, OR the proposed installation on this structure does not require notification to the FAA pursuant to 47 C.F.R. Section 17.7.</p>	Yes No No Yes
	Environmental Effect	Would a Commission grant of Authorization for this location be an action which may have a significant environmental effect? (See Section 1.1306 of 47 C.F.R.)	No
	Broadcast Facility	The proposed facility complies with the applicable engineering standards and assignment requirements of 47 C.F.R. Sections 73.616, 73.622(i), 73.623(e), 73.625, 73.1030, and 73.1125.	Yes
