

TECHNICAL SUMMARY  
APPLICATION FOR MODIFICATION OF CONSTRUCTION PERMIT  
TELEVISION STATION WNJX-TV  
MAYAGUEZ, PUERTO RICO  
CHANNEL 31 476 KW (H), 142.8 KW (V) 699 M HAAT

1. The WNJX-TV reassignment facility on Channel 31 is one of the facilities listed in the FCC's one percent service loss list from the FCC's *Closing and Channel Reassignment Public Notice*.<sup>\*</sup> Therefore, WNJX-TV is eligible for filing in the first priority window.<sup>†</sup>

2. The instant application for modification of construction permit was prepared to increase the proposed antenna height above average terrain (HAAT) for the WNJX-TV facility to 699 m due to corrections in the actual antenna location and site elevation. While the combination of effective radiated power (ERP) and HAAT exceeds the maximum normally permitted for a UHF station with its proposed HAAT, the proposal is compliant with the 'largest station in the market' provision of the FCC Rules. The predicted coverage map included with the application demonstrates that total area of the WNJX-TV noise-limited service contour is within that of station WAPA-TV, San Juan, PR (Channel 27).

3. The FAA is being notified of the changes. The antenna structure registration will be modified once a determination of no hazard has been received from the FAA.

4. The proposed WNJX-TV facility is compliant with all interference protection requirements. The results of the interference analysis using the FCC's *TVStudy* predicted service and interference analysis tool are attached hereto.

5. The instant proposal is compliant with the principal city coverage requirements of Mayaguez. This is illustrated in the Predicted Coverage Contours exhibit (Figure 1).
