

RE: Interference Explanation for K21IH-D

The Utah plan works in a daisy chain thus forcing an A-B plan.

The A Bank consists of channels 14 to 24. The B Bank of channels consists of 26 to 36.

The requested new channel for K21IH-D is 32, otherwise it cannot be received at the Orderville site because it will be adjacent to the new channels 20 and 22.

Even though K21IH-D is not displaced it will be necessary for it to move to 32 for the A-B plan to work, thus, keeping service to these rural residents.

Please see attached plan.

Respectfully,

Mauri Parsons
