Re: Notification of Interference from K51DI-D to 700MHz License WQJQ716

Dear K51DI-D Licensee:

T-Mobile USA, Inc. ("T-Mobile") has deployed 4G LTE services utilizing 700MHz spectrum in the Denver, CO market. T-Mobile is receiving interference to its 700MHz operations near Salida, CO from your television operations, K51DI-D, located nearby. T-Mobile is striving to meet the performance requirements<sup>1</sup> attached to its 700 MHz licenses and to provide improved 4G LTE service to its customers in the area. T-Mobile's service to the Denver, CO market would be improved if K51DI-D can move from Ch. 51 to a lower channel.

T-Mobile appreciates your work to address this interference issue and supports your action to seek Special Temporary Authority from the FCC to move K51DI-D from Ch. 51 to a new temporary channel. As you may be aware K51DI-D is eligible for reimbursement for this channel move through an agreement between T-Mobile and PBS.

If you have any questions about the foregoing, please contact Ilona Lindsay at (425) 383-4462 or by email at [Ilona.lindsay@T-Mobile.com](mailto:Ilona.lindsay@T-Mobile.com). Thank you.

Sincerely,

Shannon Reilly Kraus  
Senior Corporate Counsel  
T-Mobile USA, Inc.
