Additional Information Regarding the KDFQ-LP Displacement Application

ANALOG OPERATION IS PROPOSED:

The underlying displacement application is for **analog**, not digital, operation, but in the LMS filing system, the default for a displacement application is for digital operation only. As a result, there is no place in the form to enter the proposed frequency offset for Channel 25 operation.

FREQUENCY OFFSET:

For analog operation, the frequency offset must be identified. For this application, the proposed offset is 'zero'.

MASK FILTER DESIGNATION:

A mask filter designation is not required for analog operation, therefore, this information is not provided in the underlying application.
